Recoded City Thomas Eramcora, Lucy Bullivant, 2016-07-01 *Recoded City* examines alternative urban design planning and architecture for the other 90% namely the practice of participatory placemaking a burgeoning practice that co author Thomas Eramcora terms recoding In combining bottom up and top down means of regenerating and rebalancing neighbourhoods affected by declining welfare or struck by disaster this growing movement brings greater resilience *Recoded City* sheds light on a new epoch in the relationship between cities and civil society by presenting an emerging range of collaborative solutions and distributed governance models The authors draw on their own fresh research of global pioneers forging localist design strategies public realm interventions and new stakeholder dynamics As the world becomes increasingly digital and virtual a myriad of online tools and technological options is becoming available These give unprecedented co creation opportunities to communities and professionals alike yielding the benefits of a more open DIY society Because of its close engagement with people place and local identity the field of participatory placemaking has huge untapped potential Responding to the challenges of the Anthropocene era *Recoded City* is for decision makers developers and practitioners working globally to make better and more liveable cities

Is There Purpose in Biology? Denis Alexander, 2018-06-22 Atheists assert that the natural world has no meaning or purpose Dr Denis Alexander Emeritus Director of The Faraday Institute for Science and Religion at St Edmunds College Cambridge draws a different conclusion Not only do recent evolutionary biological data appear inconsistent with the claim that the world is purposeless but the Christian doctrine of creation has provided and continues to provide both context and stimulus for the study of the natural world Christians started biology However is a belief in an omnipotent benign Creator consistent with a world of pain and suffering From a lifetime study in the biological sciences Denis Alexander believes that whilst the cost of existence is extremely high it can nonetheless be squared with the idea of a God of love whose ultimate purposes for humankind render that cost more comprehensible

2014 Global Hunger Index Saltzman, Amy,Birol, Ekin,Wiesman, Doris,Prasai, Nilam,Yohannes, Yisehac,Menon, Purnima,Thompson, Jennifer,2014-10-13 With one more year before the 2015 deadline for achieving the Millennium Development Goals the 2014 Global Hunger Index report offers a multifaceted overview of global hunger that brings new insights to the global debate on where to focus efforts in the fight against hunger and malnutrition The state of hunger in developing countries as a group has improved since 1990 falling by 39 percent according to the 2014 GHI Despite progress made the level of hunger in the world is still serious with 805 million people continuing to go hungry according to estimates by the Food and Agriculture Organization of the United Nations The global average obscures dramatic differences across regions and countries Regionally the highest GHI scores and therefore the highest hunger levels are in Africa south of the Sahara and South Asia which have also experienced the greatest absolute improvements since 2005 South Asia saw the steepest absolute decline in GHI scores since 1990 Progress in addressing child underweight was the main factor behind the improved GHI score for the region since 1990

The Proceedings from Halophiles 2013, the International Congress on Halophilic Microorganisms R. Thane Papke,Aharon Oren,Antonio Ventosa,Jesse Dillon,2015-07-08 The Halophiles 2013 meeting is a multidisciplinary international congress with a strong history of regular triennial meetings since 1978 Our mission is to bring researchers from a wide diversity of investigation interests e g protein and species evolution niche adaptation ecology taxonomy genomics metagenomics horizontal gene transfer gene regulation DNA replication repair and recombination signal transduction community assembly and species distribution astrobiology biotechnological applications adaptation to radiation desiccation osmotic stress into a single forum for the integration and synthesis of ideas and data from all three domains of life and their viruses yet from a single environment salt concentrations greater than seawater This cross section of research informs our understanding of the microbiological world in many ways The halophilic environment is extreme especially above 10% NaCl restricting life solely to microbes The microorganisms that

live there are adapted to extreme conditions and are notable for their ability to survive high doses of radiation and desiccation Therefore the hypersaline environment is a model system both the abiotic and biologic factors for insightful understanding regarding conditions and life in the absence of plant and animals e g life on the early earth and other solar system bodies like Mars and Europa Lower salinity conditions e g 6-10% NaCl form luxuriant microbial mats considered modern analogues of fossilized stromatolites which are enormous microbially produced structures fashioned during the Precambrian and still seen today in places like Shark's Bay Australia Hypersaline systems are island like habitats spread patchily across the earth's surface and similar to the Galapagos Islands represent unique systems excellent for studying the evolutionary pressures that shape microbial community assembly adaptation and speciation The unique adaptations to this extreme environment produce valuable proteins enzymes and other molecules capable of remediating harsh human instigated environments and are useful for the production of biofuels vitamins and retinal implants for example This research topic is intended to capture the breadth and depth of these topics

Control of Visceral Leishmaniasis by Immunotherapeutic and Prophylactic Strategies Nahid Ali, Hira L. Nakhasi, Jesus G Valenzuela, Alexandre Barbosa Reis, 2015-06-28 Visceral leishmaniasis VL or kala azar is the most dreadful of all forms of leishmaniasis caused by *Leishmania donovani* in Old World and *Leishmania chagasi* and or *Leishmania infantum* in New World affecting millions of people worldwide In active VL macrophages host the replicating amastigotes in phagolysosomal compartments leading to splenomegaly hepatomegaly hyperglobulinemia anemia weight loss incessant fever and ultimately death if not treated Treatments available against the disease are limited by increased incidence of resistance serious side effects high cost and long course of treatment Immuno chemotherapy is an alternative to overcome the limitations of the drugs against VL Combination of one or more of immunotherapeutic agents like BCG Alum IFN antigen pulsed dendritic cells DC etc with chemotherapeutic drugs have been tested raising hopes for a suitable immuno chemotherapy against VL and Post Kala azar Dermal Leishmaniasis PKDL Antagonists of IL 10 TGF IL 13 have been effectively used with pentavalent antimonials in treatment of experimental VL Some parasitic antigens and liposomal formulations have also been shown to impart superior therapeutic effectiveness to antileishmanial drugs For socio economic reasons prophylaxis is always more desirable than therapy Although no vaccine against any form of leishmaniasis in humans is available patients successfully treated show considerable protection from reinfection highlighting the possibility of developing prophylactic measures against the disease Subsequently a lot of interest has been focused recently towards developing vaccines against VL and many potential vaccine candidates like whole cell attenuated or heat killed crude fractions purified subunits DNAs recombinant proteins fusion proteins and genetically modified live attenuated parasites etc have been reported These vaccine candidates are either activators of CD4 Th1 cells and or CD8 T cells or neutralizers of immuno suppression Cationic liposomal formulations nanoparticle and virosome delivery systems etc have been used to increase potency and durability of various vaccine

candidates Immuno modulators like TLR agonists have been shown to be promising adjuvants in enhancing efficacy and overcoming the challenge of human administrable vaccine formulations Recently role of sand fly salivary gland proteins as immune modulators also has been explored Various strategies such as heterologous prime boosting targeted antigen delivery adjuvant mediated protection have been undertaken Likewise precise role of regulatory T cells Tregs in VL disease progression needs to be investigated and exploited to develop both immuno therapeutic and prophylactic methods A breakthrough in immunotherapy and prophylactic strategy would help in eradication of the parasites from the pool of natural reservoirs namely VL and PKDL patients asymptomatic carrier individuals and infected dogs ensuring success of global VL control programs

The Art of Classic Planning

Nir Haim Buras, 2020-01-28 An accomplished architect and urbanist goes back to the roots of what makes cities attractive and livable demonstrating how we can restore function and beauty to our urban spaces for the long term Nearly everything we treasure in the world s most beautiful cities was built over a century ago Cities like Prague Paris and Lisbon draw millions of visitors from around the world because of their exquisite architecture walkable neighborhoods and human scale Yet a great deal of the knowledge and practice behind successful city planning has been abandoned over the last hundred years

not because of traffic population growth or other practical hurdles but because of ill considered theories emerging from Modernism and reactions to it The errors of urban design over the last century are too great not to question The solutions being offered today sustainability walkability smart and green technologies hint at what has been lost and what may be regained but they remain piecemeal and superficial In The Art of Classic Planning architect and planner Nir Haim Buras documents and extends the time tested and holistic practices that held sway before the reign of Modernism With hundreds of full color illustrations and photographs that will captivate architects planners administrators and developers The Art of Classic Planning restores and revitalizes the foundations of urban planning Inspired by venerable cities like Kyoto Vienna and Venice and by the great successes of L'Enfant's Washington Haussmann's Paris and Burnham's Chicago Buras combines theory and a host of examples to arrive at clear guidelines for best practices in classic planning for today's world The Art of Classic Planning celebrates the enduring principles of urban design and invites us to return to building beautiful cities

Cyanobacteria: The Green E. coli Anne M Ruffing, Toivo Kallas, 2016-03-16 As the world struggles to reduce its dependence on fossil fuels and curb greenhouse gas emissions industrial biotechnology is also going green *Escherichia coli* has long been used as a model Gram negative bacterium not only for fundamental research but also for industrial applications Recently however cyanobacteria have emerged as candidate chassis for the production of commodity fuels and chemicals utilizing CO₂ and sunlight as the main nutrient requirements In addition to their potential for reducing greenhouse gas emissions and lowering production costs cyanobacteria have naturally efficient pathways for the production of metabolites such as carotenoids which are of importance in the nutraceutical industry The unique metabolic and regulatory pathways present in cyanobacteria present new challenges for metabolic engineers and synthetic biologists Moreover their requirement for light and the dynamic regulatory mechanisms of the diurnal cycle further complicate the development and application of cyanobacteria for industrial applications Consequently significant advancements in cyanobacterial engineering and strain development are necessary for the development of a green *E. coli* This Research Topic will focus on cyanobacteria as organisms of emerging industrial relevance including research focused on the development of genetic tools for cyanobacteria the investigation of new cyanobacterial strains the construction of novel cyanobacterial strains via genetic engineering the application of omics tools to advance the understanding of engineered cyanobacteria and the development of computational models for cyanobacterial strain development

Redox and Nitrosative Signaling in Cardiovascular System: from Physiological Response to Disease Mariarosaria Santillo, Pasquale Pagliaro, 2019-01-22 The role of ROS/RNS signaling in cardiovascular functions and diseases is increasingly emerging in the last decades The involvement of ROS/RNS in the control of a large number of cardiovascular functions like the regulation of the vascular tone the control of blood pressure or myocyte excitation contraction coupling and force development has been broadly investigated and in part clarified On the other hand many efforts have been focused in clarifying the redox mechanisms involved in cardiovascular

diseases like ischemia reperfusion injury diabetes associated cardiovascular dysfunctions atherosclerosis or hypertension just to mention the major ones However in most cases the two levels of investigation remain separate and not interlaced failing in the attempt to provide a unified vision of the pathophysiologic mechanisms of cardiovascular diseases The major aim of the Research Topic has been to collect original papers and review articles dealing with the issue from basic to translation research point of views The topic includes contributions that highlight different interesting aspects of cardiovascular biology with an integrated approach useful for the development of new ideas and advancements in the field of redox signaling in the control of normal cardiovascular functions and their disruption in diseases

Criticality as a signature of healthy neural systems: multi-scale experimental and computational studies Paolo Massobrio, Lucilla de Arcangelis, Valentina Pasquale, Henrik Jeldtoft Jensen, Dietmar Plenz, 2015-05-08 Since 2003 when spontaneous activity in cortical slices was first found to follow scale free statistical distributions in size and duration increasing experimental evidences and theoretical models have been reported in the literature supporting the emergence of evidence of scale invariance in the cortex Although strongly debated such results refer to many different in vitro and in vivo preparations awake monkeys anesthetized rats and cats in vitro slices and dissociated cultures suggesting that power law distributions and scale free correlations are a very general and robust feature of cortical activity that has been conserved across species as specific substrate for information storage transmission and processing Equally important is that the features reminiscent of scale invariance and criticality are observed at scale spanning from the level of interacting arrays of neurons all the way up to correlations across the entire brain Thus if we accept that the brain operates near a critical point little is known about the causes and or consequences of a loss of criticality and its relation with brain diseases e g epilepsy The study of how pathogenetical mechanisms are related to the critical non critical behavior of neuronal networks would likely provide new insights into the cellular and synaptic determinants of the emergence of critical like dynamics and structures in neural systems At the same time the relation between the impaired behavior and the disruption of criticality would help clarify its role in normal brain function The main objective of this Research Topic is to investigate the emergence disruption of the emergent critical like states in healthy impaired neural systems

Adrenal Cortex: From Physiology to Disease Pierre Val, Antoine Martinez, 2016-07-18 The adrenal gland plays essential roles in the control of body homeostasis stress and immune responses The adrenal cortex represents up to 90% of the gland and is specialised in the production of mineralocorticoids glucocorticoids and adrenal androgens This production is tightly coordinated and results from a unique zonal organisation Although our knowledge of the molecular mechanisms controlling adrenal steroidogenesis is quite extensive for decades the mechanisms of adrenal cortex development cellular homeostasis and renewal have remained elusive The advent of new high throughput technologies and sophisticated genetic approaches has brought tremendous progress in our understanding of how the adrenal cortex achieves and maintains its particular organisation The aim of this Frontiers in Endocrinology Topic is to provide readers with a

snapshot of our current knowledge on adrenal physiology and how deregulations of these processes result in adrenal diseases This includes but is not limited to basic research on adrenal development cell lineage identification progenitor cells tissue renewal control of differentiation and zonation and clinical research on the identification of disease related genes
