Training and Simulation
Shem Malmquist, Dennis A. Vincenzi, Katherine Lemos, Shawn Pruchnicki, 2025-09-16. Developing training and simulation is a complex business. From understanding human performance, design usability and the limitations of training types to considerations with virtual reality (VR) producing realistic scenarios and even helping accident investigations, leaves the practitioner with almost an overwhelming challenge. However, they know that their goal is to cut out developing methods that can train and test the sharp end professional to be ready for any eventuality, whether in the air, a chemical plant or the operating room. Through chapters written by leading experts, this book aims to address the key questions and concerns when developing training and simulation in high risk industries. This book identifies unexplored challenges and weaknesses in the aviation domain, including ground based training and flight simulation compared to the real world of in flight complex aircraft operations, aviation accidents and incidents, airspace and air traffic control, aeronautical communications, air navigation, aircraft automation and pilot certification and testing. These concerns are not just relevant to aviation, however. This book pushes beyond aviation to include other fields including petrochemical and medicine that while on the surface are different, include some of the same human and organizational challenges. It integrates machine challenges with human factors science and includes a view of the corporate influences on training. Safety is a consideration in all the challenges and current limitations in training and simulation and the book is written with the intention of improving both training and safety as industries deal with more and more complex advanced technology. Underpinned by case studies and real life examples, this book will give the reader a thorough overview of the limitations of current training methods but with a view to improving and developing better methods for future training scenarios. Opportunities and solutions are presented for current or future research and the application and incorporation of these in day day operations. Training and Simulation Processes, Challenges and Solutions will appeal to practitioners of human factors, training pilots and ground operators, engineers involved in systems design, safety specialists, test evaluators and accident investigators across multiple domains.
