Tooley, David Wyatt, 2009 This book provides a detailed introduction to the principles of aircraft electrical and electronic systems It delivers the essential principles and knowledge required by certifying mechanics technicians and engineers engaged in engineering maintenance on commercial aircraft and in general aviation It is well suited for anyone pursuing a career in aircraft maintenance engineering or a related aerospace engineering discipline and in particular those studying for licensed aircraft maintenance engineer status The book systematically covers the avionics content of EASA Part 66 modules 11 and 13 syllabus and is ideal for anyone studying as part of an EASA and FAR 147 approved course in aerospace engineering All the necessary mathematical electrical and electronic principles are explained clearly and in depth meeting the requirements of EASA Part 66 modules City and Guilds Aerospace Engineering modules BTEC National Units elements of BTEC Higher National Units and a Foundation Degree in aircraft maintenance engineering or a related discipline Book Jacket **Aviation Electrician's Mate 1 & C** Naval Education and Training Program Development Center, 1976 *Blueprint Reading And Sketching Including Machine Drawings; Piping Systems; Electrical and Electronics Prints; Architectural and Structural Steel Drawings* , Chapter 1 BLUEPRINTS When you have read and understood this chapter you should be able to answer the following learning objectives Describe blueprints and how they are produced Identify the information contained in blueprints Explain the proper filing of blueprints Blueprints prints are copies of mechanical or other types of technical drawings The term blueprint reading means interpreting ideas expressed by others on drawings whether or not the drawings are actually blueprints Drawing or sketching is the universal language used by engineers technicians and skilled craftsmen Drawings need to convey all the necessary information to the person who will make or assemble the object in the drawing Blueprints show the construction details of parts machines ships aircraft buildings bridges roads and so forth BLUEPRINT PRODUCTION Original drawings are drawn or traced directly on translucent tracing paper or cloth using black waterproof India ink a pencil or computer aided drafting CAD systems The original drawing is a tracing or master copy These copies are rarely if ever sent to a shop or site Instead copies of the tracings are given to persons or offices where needed Tracings that are properly handled and stored will last indefinitely The term blueprint is used loosely to describe copies of original drawings or tracings One of the first processes developed to duplicate tracings produced white lines on a blue background hence the term blueprint Today however other methods produce prints of different colors The colors may be brown black gray or maroon The differences are in the types of paper

and developing processes used A patented paper identified as BW paper produces prints with black lines on a white background The diazo or ammonia process produces prints with either black blue or maroon lines on a white background Another type of duplicating process rarely used to reproduce working drawings is the photostatic process in which a large camera reduces or enlarges a tracing or drawing The photostat has white lines on a dark background Businesses use this process to incorporate reduced size drawings into reports or records The standards and procedures prescribed for military drawings and blueprints are stated in military standards MIL STD and American National Standards Institute ANSI standards The Department of Defense Index of Specifications and Standards lists these standards it is issued on 31 July of each year The following list contains common MIL STD and ANSI standards listed by number and title that concern engineering drawings and blueprints
