Approximation Algorithms Vijay V. Vazirani, 2002-12-05 Covering the basic techniques used in the latest research work the author consolidates progress made so far including some very recent and promising results and conveys the beauty and excitement of work in the field He gives clear lucid explanations of key results and ideas with intuitive proofs and provides critical examples and numerous illustrations to help elucidate the algorithms Many of the results presented have been simplified and new insights provided Of interest to theoretical computer scientists operations researchers and discrete mathematicians

Algorithms Sanjoy Dasgupta, Christos H. Papadimitriou, Umesh Virkumar Vazirani, 2006 This text extensively class tested over a decade at UC Berkeley and UC San Diego explains the fundamentals of algorithms in a story line that makes the material enjoyable and easy to digest Emphasis is placed on understanding the crisp mathematical idea behind each algorithm in a manner that is intuitive and rigorous without being unduly formal Features include The use of boxes to strengthen the narrative pieces that provide historical context descriptions of how the algorithms are used in practice and excursions for the mathematically sophisticated Carefully chosen advanced topics that can be skipped in a standard one semester course but can be covered in an advanced algorithms course or in a more leisurely two semester sequence An accessible treatment of linear programming introduces students to one of the greatest achievements in algorithms An optional chapter on the quantum algorithm for factoring provides a unique peephole into this exciting topic In addition to the text DasGupta also offers a Solutions Manual which is available on the Online Learning Center Algorithms is an outstanding undergraduate text equally informed by the historical roots and contemporary applications of its subject Like a captivating novel it is a joy to read Tim Roughgarden Stanford University

Invitation to Fixed-Parameter Algorithms Rolf Niedermeier, 2006-02-02 This research level text is an application oriented introduction to the growing and highly topical area of the development and analysis of efficient fixed parameter algorithms for optimally solving computationally hard combinatorial problems The book is divided into three parts a broad introduction that provides the general philosophy and motivation followed by coverage of algorithmic methods developed over the years in fixed parameter algorithmics forming the core of the book and a discussion of the essentials from parameterized hardness theory with a focus on W 1 hardness which parallels NP hardness then stating some relations to polynomial time approximation algorithms and finishing up with a list of selected case studies to show the wide range of applicability of the presented methodology Aimed at graduate and research mathematicians programmers algorithm designers and computer scientists the book introduces the basic techniques and results and provides a fresh view on this highly innovative field of algorithmic research

50 Years of Integer Programming 1958-2008 Michael Jünger, Thomas M. Liebling, Denis Naddef, George L. Nemhauser, William R. Pulleyblank, Gerhard Reinelt, Giovanni Rinaldi, Laurence A. Wolsey, 2009-11-06 In 1958 Ralph E Gomory transformed the field of integer programming when he published a paper that described a cutting plane algorithm for pure integer programs and

announced that the method could be refined to give a finite algorithm for integer programming In 2008 to commemorate the anniversary of this seminal paper a special workshop celebrating fifty years of integer programming was held in Aussois France as part of the 12th Combinatorial Optimization Workshop It contains reprints of key historical articles and written versions of survey lectures on six of the hottest topics in the field by distinguished members of the integer programming community Useful for anyone in mathematics computer science and operations research this book exposes mathematical optimization specifically integer programming and combinatorial optimization to a broad audience *Proceedings of 4th International Conference on Mathematical Modeling and Computational Science* Souvik Pal,Álvaro Rocha,2025-06-21 This book aims to capture the interest of researchers and professionals in information technology computer science and mathematics It covers fundamental and advanced concepts related to intelligent computing paradigms data sciences graph theory and mathematical modeling In high performance computing the need for intelligent adaptive computing mechanisms and the integration of mathematical modeling in computational algorithms is becoming increasingly significant Serving as a valuable resource for industry professionals this book also supports beginners in gaining insights into enhanced computing paradigms and mathematical concepts from foundational to advanced levels Our objective is to provide a platform for researchers engineers academicians and industry experts worldwide to share their findings on emerging trends The authors believe this book not only presents innovative ideas but also fosters engaging discussions and inspires new perspectives
