be organisms living in their depths Alien Oceans reveals the science behind the thrilling quest to find out Kevin Peter Hand is one of today's leading NASA scientists and his pioneering research has taken him on expeditions around the world In this captivating account of scientific discovery he brings together insights from planetary science biology and the adventures of scientists like himself to explain how we know that oceans exist within moons of the outer solar system like Europa Titan and Enceladus He shows how the exploration of Earth's oceans is informing our understanding of the potential habitability of these icy moons and draws lessons from what we have learned about the origins of life on our own planet to consider how life could arise on these distant worlds Alien Oceans describes what lies ahead in our search for life in our solar system and beyond setting the stage for the transformative discoveries that may await us **The Deep, Wide, and Dark** Dewey D.
