Uraltseva (Mathematikerin, Russland), This collection presents new results in algebra functional analysis and mathematical physics In particular evolution and spectral problems related to small motions of viscoelastic fluid are considered Specific areas covered in the book include functional equations and functional operator equations from the point of view of the C algebraic approach the existence of an isomorphism between certain ideals regarded as Galois modules spectral problems in singularly perturbed domains scattering theory the existence of bounded solutions to the equation  $\operatorname{div} u f$  in a plane domain and a compactification of a locally compact group Also given is an historic overview of the mathematical seminars held at St Petersburg State University The results ideas and methods given in the book will be of interest to a broad range of specialists **Graduate Courses, a Handbook for Graduate Students**, 1894 **Graduate Courses**, 1894 **Graduate Handbook ...** Clyde Augustus Duniway, Barclay W. decidability This role is traced in the book for various formal objective languages The work also includes helpful exercises to aid the reader's assimilation of the book's material Intended for advanced undergraduate and graduate students in mathematics and philosophy this book can be used to teach special courses in logic with an emphasis on algebraic methods for self study and also as a reference work
