

Wave Calculations

Speed of a wave = wavelength $\times$ frequency $v = \lambda f$ v = velocity (speed), measured in meters/second (m/s) λ = wavelength, measured in meters (m) f = frequency, measured in Hertz (Hz = 1/s)	The speed of a wave depends on the medium that it is travelling through. $f = 1/T$ f = frequency, measured in Hertz (Hz) T = period, measured in seconds (s)

Partially Integrable Evolution Equations in Physics R. Conte,N. Boccara,2012-12-06 In the many physical phenomena ruled by partial differential equations two extreme fields are currently overcrowded due to recent considerable developments 1 the field of completely integrable equations whose recent advances are the inverse spectral transform the recursion operator underlying Hamiltonian structures Lax pairs etc 2 the field of dynamical systems often built as models of observed physical phenomena turbulence intermittency Poincare sections transition to chaos etc In between there is a very large region where systems are neither integrable nor nonintegrable but partially integrable and people working in the latter domain often know methods from either 1 or 2 Due to the growing interest in partially integrable systems we decided to organize a meeting for physicists active or about to undertake research in this field and we thought that an appropriate form would be a school Indeed some of the above mentioned methods are often adaptable outside their original domain and therefore worth to be taught in an interdisciplinary school One of the main concerns was to keep a correct balance between physics and mathematics and this is reflected in the list of courses *Symmetry and Exact Solutions of Nonlinear Mathematical Physics Equations* Gangwei Wang,Xiangpeng Xin ,Samir A.
