Cases on Enhancing P-16 Student Engagement With Digital Technologies Gierhart, Aaron R.,2024-12-27 Reimagining how digital technologies are integrated into education is crucial for fostering active and meaningful student engagement Traditional knowledge centric approaches often overlook the dynamic processes students use to interact with and apply technology in their learning By focusing on how students actively engage with digital tools to meet academic and developmental goals educators can create richer more effective learning experiences This shift not only enhances academic outcomes but also prepares students with the critical skills needed to navigate and contribute to an increasingly digital world *Cases on Enhancing P 16 Student Engagement With Digital Technologies* features cases of teaching and learning with digital technologies in P 16 educational settings focusing specifically on what learners do with technology It shares cases of teaching in which technologies are leveraged in student centered ways that transform learning and allow students to engage in authentic meaningful learning experiences Covering topics such as artificial intelligence AI immersive learning experiences and traditional learning this book is an excellent resource for P 16 educators leaders stakeholders policymakers and more

Essential Partial Differential Equations David F. Griffiths,John W. Dold,David J. Silvester,2015-09-24 This volume provides an introduction to the analytical and numerical aspects of partial differential equations PDEs It unifies an analytical and computational approach for these the qualitative behaviour of solutions being established using classical concepts maximum principles and energy methods Notable inclusions are the treatment of irregularly shaped boundaries polar coordinates and the use of flux limiters when approximating hyperbolic conservation laws The numerical analysis of difference schemes is rigorously developed using discrete maximum principles and discrete Fourier analysis A novel feature is the inclusion of a chapter containing projects intended for either individual or group study that cover a range of topics such as parabolic smoothing travelling waves isospectral matrices and the approximation of multidimensional advection diffusion problems The underlying theory is illustrated by numerous examples and there are around 300 exercises designed to promote and test understanding They are starred according to level of difficulty Solutions to odd numbered exercises are available to all readers while even numbered solutions are available to authorised instructors Written in an informal yet rigorous style *Essential Partial Differential Equations* is designed for

mathematics undergraduates in their final or penultimate year of university study but will be equally useful for students following other scientific and engineering disciplines in which PDEs are of practical importance The only prerequisite is a familiarity with the basic concepts of calculus and linear algebra
