Algebraic Methods in Semantics M. Nivat, John C. Reynolds, 1985 This book which contains contributions from leading researchers in France USA and Great Britain gives detailed accounts of a variety of methods for describing the semantics of programming languages i e for attaching to programs mathematical objects that encompass their meaning Consideration is given to both denotational semantics where the meaning of a program is regarded as a function from inputs to outputs and operational semantics where the meaning includes the sequence of states or terms generated internally during the computation The major problems considered include equivalence relations between operational and denotational semantics rules for obtaining optimal computations especially for nondeterministic programs equivalence of programs meaning preserving transformations of programs and program proving by assertions Such problems are discussed for a variety of programming languages and formalisms and a wealth of mathematical tools is described The Logic Programming Paradigm Krzysztof R. Apt, Victor W. Marek, Mirek Truszczyński, David S. Warren, 2012-12-06 Logic Programming was founded 25 years ago This exciting new text reveals both the evolution of this programming paradigm since its inception and the impressively broad scope of current research in Logic Programming The contributions to the book deal with both theoretical and practical issues They address such diverse topics as computational molecular biology machine learning mobile computing multi agent systems planning numerical computing and dynamical systems database systems an alternative to the formulas as types approach program semantics and analysis and natural language processing The contributors are all leading world experts in Logic Programming and their contributions were all invited and refereed
