Recent Perspectives in Random Matrix Theory and Number Theory F. Mezzadri, N. C. Snaith, 2005-06-21 Provides a grounding in random matrix techniques applied to analytic number theory [University of Michigan Official Publication](#)

University of Michigan, 1986 Each number is the catalogue of a specific school or college of the University *Combinatorial Algebraic Geometry* Gregory G. Smith, Bernd Sturmfels, 2017-11-17 This volume consolidates selected articles from the 2016 Apprenticeship Program at the Fields Institute part of the larger program on Combinatorial Algebraic Geometry that ran from July through December of 2016 Written primarily by junior mathematicians the articles cover a range of topics in combinatorial algebraic geometry including curves surfaces Grassmannians convexity abelian varieties and moduli spaces This book bridges the gap between graduate courses and cutting edge research by connecting historical sources computation explicit examples and new results **Étale Cohomology** James S. Milne, 2025-04-08 An authoritative introduction to the

essential features of étale cohomology A Grothendieck's work on algebraic geometry is one of the most important mathematical achievements of the twentieth century In the early 1960s he and M Artin introduced étale cohomology to extend the methods of sheaf theoretic cohomology from complex varieties to more general schemes This work found many applications not only in algebraic geometry but also in several different branches of number theory and in the representation theory of finite and p -adic groups In this classic book James Milne provides an invaluable introduction to étale cohomology covering the essential features of the theory Milne begins with a review of the basic properties of flat and étale morphisms and the algebraic fundamental group He then turns to the basic theory of étale sheaves and elementary étale cohomology followed by an application of the cohomology to the study of the Brauer group After a detailed analysis of the cohomology of curves and surfaces Milne proves the fundamental theorems in étale cohomology those of base change purity Poincaré duality and the Lefschetz trace formula and applies these theorems to show the rationality of some very general L -series

Arithmetic Geometry, Number Theory, and Computation Jennifer S. Balakrishnan, Noam Elkies, Brendan Hassett, Bjorn Poonen, Andrew V. Sutherland, John Voight, 2022-03-15 This volume contains articles related to the work of the Simons Collaboration Arithmetic Geometry Number Theory and Computation The papers present mathematical results and algorithms necessary for the development of large scale databases like the L -functions and Modular Forms Database LMFDB The authors aim to develop systematic tools for analyzing Diophantine properties of curves surfaces and abelian varieties over number fields and finite fields The articles also explore examples important for future research Specific topics include algebraic varieties over finite fields the Chabauty-Coleman method modular forms rational points on curves of small genus S -unit equations and integral points **Galois Groups and Fundamental Groups** Tamás Szamuely, 2009-07-16 Assuming

little technical background the author presents the strong analogies between these two concepts starting at an elementary level [On \$p\$ -Adic \$L\$ -Functions for Hilbert Modular Forms](#) John Bergdall, David Hansen, 2024-07-25 View the abstract

Iwasawa Theory and Its Perspective: Volumes 1, 2, and 3 Tadashi Ochai, 2025-07-10 Iwasawa theory began in the late 1950s with a series of papers by Kenkichi Iwasawa on ideal class groups in the cyclotomic tower of number fields and their relation to p -adic L functions. The theory was later generalized by putting it in the context of elliptic curves and modular forms. The main motivation for writing this book comprised of three volumes was the need for a total perspective that includes the new trends of generalized Iwasawa theory. Another motivation is an update of the classical theory for class groups taking into account the changed point of view on Iwasawa theory. Volume 1 explains the theory of ideal class groups including its algebraic aspect, the Iwasawa class number formula, its analytic aspect, Leopoldt-Kubota L functions and the Iwasawa main conjecture which is a bridge between the algebraic and the analytic aspects. Volume 2 explains various aspects of the cyclotomic Iwasawa theory of p -adic Galois representations. Volume 3 presents additional aspects of the Iwasawa theory of p -adic Galois deformations.

Arithmetic, Geometry, Cryptography and Coding Theory Gilles Lachaud, Christophe Ritzenthaler, Michael A. Tsfasman, 2009-06-11 This volume contains the proceedings of the 11th conference on $\mathrm{AGC} 2$ T held in Marseille, France, in November 2007. There are 12 original research articles covering asymptotic properties of global fields, arithmetic properties of curves and higher dimensional varieties and applications to codes and cryptography. This volume also contains a survey article on applications of finite fields by J. P. Serre. $\mathrm{AGC} 2$ T conferences take place in Marseille, France, every 2 years. These international conferences have been a major event in the area of applied arithmetic geometry for more than 20 years.

Variations on a Theorem of Tate Stefan Patrikis, 2019-04-10 Let F be a number field. These notes explore Galois theoretic, automorphic and motivic analogues and refinements of Tate's basic result that continuous projective representations $\mathrm{Gal}(F/F)/\mathrm{PGL}_n(\mathbb{C})$ lift to $\mathrm{GL}_n(\mathbb{C})$. The author takes special interest in the interaction of this result with algebraicity for automorphic representations and geometricity in the sense of Fontaine-Mazur. On the motivic side, the author studies refinements and generalizations of the classical Kuga-Satake construction. Some auxiliary results touch on possible infinity types of algebraic automorphic representations, comparison of the automorphic and Galois Tannakian formalisms, monodromy, independence of questions for abstract Galois representations.
