Accentuate The Negative Answers:

Exploring the Integer Addition and Subtraction Landscape Laura Bofferding, Nicole M. Wessman-Enzinger, 2018-08-24

Over the past few decades there has been increased interest in how students and teachers think and learn about negative numbers from a variety of perspectives. In particular, there has been debate about when integers should be taught and how to teach them to best support students learning. This book brings together recent work from researchers to illuminate the state of our understanding about issues related to integer addition and subtraction with a goal of highlighting how the variety of perspectives support each other or contribute to the field in unique ways. In particular, this book focuses on three main areas of integer work: students thinking models and metaphors and teachers thinking. Each chapter highlights a theoretically guided study centered on integer addition and subtraction. Internationally known scholars help connect the perspectives and offer additional insights through section commentaries. This book is an invaluable resource to those who are interested in mathematics education and numerical thinking.

Epistemology Alvin I. Goldman, Matthew McGrath, 2015

Epistemology has long mesmerized its practitioners with numerous puzzles. What can we know and how can we know it? In *Epistemology: A Contemporary Introduction*, Alvin Goldman, one of the most noted contemporary epistemologists, and Matthew McGrath, known for his work on a wide range of topics in the field, have joined forces to delve into these puzzles. Featuring a clear and engaging writing style and intriguing examples, *Epistemology* surveys both traditional and emerging topics in depth, acquainting students not only with the history of the field but also its new developments and directions. The first half of the book examines core questions about the nature and structure of justification and knowledge, skepticism, and the Gettier problem, paying careful attention to reliabilism, evidentialism, contextualism, pragmatic encroachment, knowledge first epistemology, and dogmatism about perceptual justification. The second half provides lively excursions into such new topics as the relevance of cognitive science to epistemology, the prospects for experimental philosophy, and the evidential status of intuitions. The authors' open coverage of each topic, with an introduction for beginners and then move on to analyses suitable for advanced undergraduate
