This volume constitutes the proceedings of the 6th IFIP WG 8.1 Conference on the Practice of Enterprise Modeling held in November 2013 in Riga, Latvia. The focus of the PoEM conference series is on advances in the practice of enterprise modeling through a forum for sharing knowledge and experiences between the academic community and practitioners from industry and the public sector. The 19 papers accepted were carefully reviewed and selected from 80 submissions. They reflect different topics of enterprise modeling including quality of models, change management and transformation approaches and tools for agility and flexibility, enterprise modeling and business processes, enterprise modeling and information systems, and enterprise modeling cases. Additionally, one of the two keynotes is also included in this volume. *Construction Graphics* Keith A. Bisharat, 2025-02-21. Learn how managers of the construction process use construction graphics to analyze, evaluate, and organize the labor, equipment, and materials required to fulfill the design professionals' instructions regarding a project. Construction drawings are, in their essence, a set of goals, the graphic and written instructions provided by architects and engineers to construction professionals that adequately manifest the outcomes sought for a project. Construction professionals translate those instructions into discrete processes and sequences of work to which values in both time and money can be attributed. Construction Graphics has long stood as the essential treatment of this subject from the constructor's point of view. Now updated from the second edition, the third edition reflects advances in technology and project delivery systems and offers an analysis of how the ideas discussed throughout the text might be applied in the context of one system in a commercial building. Construction Graphics continues to be an indispensable volume for anyone managing construction work. Readers of the third edition of Construction Graphics will also find enhanced treatment of technology as it operates in construction project delivery and the relationship between design professionals and builders. Exercises at the end of each chapter with detailed answers in a helpful appendix. Illustrations and figures throughout to emphasize key concepts. Construction Graphics is ideal for students in construction management, construction engineering, architecture, architectural engineering, project management, and interior design programs in community college and four-year university programs.
