NEW Updated content and art reflects changes made to the new edition of the text and provides you with the tools you need to learn and master the concepts presented in the text. Introduction to Anatomy & Physiology Teacher Guide Dr Tommy Mitchell, 2016-07-25 Volume One The Musculoskeletal System opens with the building blocks of your body: the cells. Your body is built from many kinds of cells and tissues, and you will learn how they work. Even the bones and muscles that give you strength and speed depend on many types of cells. This book will show you the ins and outs of the bones in your skeleton and how they function. Give detail as to how your marvelous muscles move you. Provide a detailed glossary in the back for quick reference. Throughout the book you will learn things to do to keep your body healthy. But in a fallen, cursed world, things are bound to go wrong. We will look at what happens when disease or injury affects bones and muscles. Volume Two Cardiovascular and Respiratory Systems From the level of the cell to the organs themselves, we will examine these systems in depth. Here you will learn the incredible design of the human heart and how it is really two pumps in one. How blood moves through an incredible network of arteries and veins. What blood pressure is and the marvelous systems that help regulate it. How the respiratory system allows us to get the bad air out and the good air in. Along the way, we will see what happens when things go wrong. We will also suggest things to do to keep the heart and lungs healthy. Although the world insists that our bodies are merely the result of time and chance, as you examine the human body closely, you will see that it cannot be an accident. It can only be the product of a Master.
