Angioplasty in Acute Myocardial Infarction James E. Tcheng, 2009-04-29 The past 50 years have witnessed a breathtaking evolution in the approaches to the patient with an acute ST elevation myocardial infarction In the 1960s the now commonplace cardiac intensive care unit was but a nascent idea Without much to offer the patient but weeks of absolute bedrest substantial morbidity and high rates of mortality were the norm Just 30 years ago seminal discoveries by DeWood and colleagues suggested that the culprit was plaque rupture with thrombosis not progressive luminal compromise Subsequent fibrinolyt based strategies resulted in a halving of the mortality of acute myocardial infarction With the introduction of balloon angioplasty in the late 1970s a few interventional cardiologists braved the question why not perform emergency angioplasty as a primary reperfusion strategy Indeed reports of successful reperfusion via balloon angioplasty

appeared mostly in local newspapers as early as 1980. Despite being thought of as heretical by mainstream cardiology, these pioneers nonetheless persevered, proving the benefit of state-of-the-art balloon angioplasty compared with state-of-the-art thrombolytic therapy in a series of landmark trials published in the New England Journal of Medicine in March of 1993. Publication of the first edition of Primary Angioplasty in Acute Myocardial Infarction in 2002 to some extent anticipated the widespread acceptance of primary percutaneous coronary intervention as the standard of care. Since then, in all respects, the evolution of emergency percutaneous revascularization has only accelerated. The universal replacement of balloon angioplasty with stent implantation was clearly one key.

The Cardiac Care Unit Survival Guide Herzog, 2012. This book is geared toward cardiologists, trainees, and housestaff—anyone who rotates or practices in the CCU—who must grasp the subtleties when treating patients in a cardiac care unit. It is organized in a way to help you understand the simplified pathophysiology of the disease, the diagnosis modalities, the initial critical care management in the CCU, the clinical care in a step-down unit, and plan for discharge therapy. Dr. Herzog has developed unified pathways for the management of patients presenting with acute chest pain or its equivalent: acute heart failure, atrial fibrillation and flutter, syncope, cardiac arrest, hypertension, and hyperglycemia. Algorithms and pathways for management are provided in each chapter for easy implementation in any health care system. In addition, because specialized units are frightening to the patients and their families, there is a section in each chapter on what the patient and family need to know that encompasses a capsulated explanation of the condition and treatment management. A companion website accompanies the text that includes fully searchable text and patient information.
