

6.1 Inventory systems

A business can decide which of the following two **inventory systems** to use to record and control their inventory.

SYSTEM	IMPORTANT POINTS
Perpetual	a) Entries are made in a Balance Sheet account called trading stock (an asset account) every time goods are bought and sold. b) Cost of sales needs to be calculated and recorded every time goods are sold. c) When stock is purchased the trading stock account is debited with the cost price (the asset is increasing). d) When stock is sold the trading stock account is credited with the cost price (the asset is decreasing). e) Any additional costs when purchasing stock are debited to the trading stock account (e.g. carriage on purchases). f) This system is better for the internal control of inventory.
Periodic	a) Businesses would decide to use this system when it is not always feasible to calculate cost of sales every time goods are sold. b) Stock purchases are recorded in a nominal account called purchases (an expense account). c) Additional expenses when purchasing stock (e.g. carriage on purchases) are recorded separately in a nominal account called carriage on purchases (an expenses account). d) Cost of sales is therefore only calculated periodically by using the formula: $\text{Opening stock} + \text{purchases} + \text{carriage on purchases} + \text{import duties} + \text{customs duties} - \text{closing stock} = \text{cost of sales}.$
