

CHILD CPR

1 - 8
YEARS

IN AN
EMERGENCY
CALL
911

1. Attempt to wake the child and call for help.

If the child is not breathing (or is just gasping for breath), call 911 immediately and go to step 2. If someone else is there to help, one of you call 911 while the other moves on to step 2.

2. Begin chest compressions.

If you are not trained in CPR, compressions to the chest may not be successful.

It's important to keep your hands and arms straight. Don't lean over the child. Keep your elbows straight and your shoulders directly over the child's chest.

If the child is not breathing, place one hand on the breast bone directly between the child's nipples. Push straight down on the chest at least 2 inches (4-5 cm) or a third of the child's body. Allow the chest to completely recoil before the next compression. Compress the chest at a rate of at least 100 pushes per minute. Perform 30 compressions at this rate.

3. Open the airway.

After 30 compressions, open the child's airway using the head-tilt, chin-lift method. Pinch the child's nose and make a seal over the child's mouth with yours. Use a CPR mask if available.

4. Begin rescue breaths.

Give the child a breath, just enough to make the chest rise. Let the chest fall, then repeat the rescue breath once more. If the chest doesn't rise on the first breath, reposition the head and try again. Whether it works on the second try or not, go to step 5.

If you don't feel comfortable with this step, just continue to do chest compressions at a rate of 100 per minute.

2 Breaths

5. Repeat chest compressions.

Repeat chest compressions. Do 30 more chest compressions just like you did the first time.

30 Compressions

6. Repeat rescue breaths.

Repeat rescue breaths. Give more breaths just like you did in step 4 (remember you're always giving rescue breaths). Repeat steps 5 and 6 for about two minutes (about 5 cycles of 30 compressions and 2 rescue breaths).
