Airline Industry Nawal K. Taneja, 2016-06-23 Many business sectors have been and are being forced to compete with new competitors disrupters of some sort who have found new ways to create and deliver new value for customers often through the use of technology that is coupled with a new underlying production or business model and or a broad array of partners including in some cases customers themselves Think about the disruption created by Apple by the introduction of the iPod and iTunes and by Netflix within the entertainment sectors using partners within the ecosystem think of Uber that didn't build an app around the taxi business but rather built a mobility business around the app to improve customer experience Airline Industry considers whether the airline industry is poised for disruptive innovations from inside or outside of the

industry Although airlines have a long history of continuous improvements and innovation few of their innovations can be classified as disruptive innovations The few disruptive innovations that did emerge were facilitated for example by new technology jet aircraft and government policy deregulation Now there are new forces in play customers who expect to receive products that are more personalized and experience based throughout the entire journey new customer interfaces via social media advanced information systems and analytics financially powerful airlines based in emerging nations and the rise of unencumbered entrepreneurs who think differently as well as platform focused integrators **Airimagination** Nawal K. Taneja,2022-09-29 Unprecedented social changes accelerated by facilitating technologies and the COVID 19 pandemic are calling for airlines to think deeply and non conventionally on what will be important to existing and new travelers as they change their lifestyles New thinking requires airlines to extend the boundaries of their businesses to go beyond their traditional domains This need goes beyond the renovation and iteration of conventional products to the transformation of products requiring new ideas and ways to scale them Examples include the development of cost effective urban air mobility intermodal passenger transportation door to door travel that is sustainable and personalized offers Airimagination Extending the Airline Business Boundaries raises some thought provoking questions and provides a direction for practical solutions For example what if airlines developed products and services that finally meet end to end needs of customers seamlessly by collaborating in the value adding open ecosystems using platforms that facilitate effective engagement with both digital and nondigital customers and employees in real time and at each touch point Ironically the current time is an advantage for some airlines as they already have had to deal with a deep and wide disruption caused by the pandemic leading operations to start from ground zero This book the latest in a long and well regarded series by Nawal K Taneja explores innovative best practices within the airline business world complemented by numerous insightful perspectives contained in multiple forewords and thought leadership pieces This book is aimed primarily at high level practitioners within the airline industry and related businesses *Strategic Airline Retailing and Solutions* Nawal K. Taneja,2023-11-07 While airlines have been looking into the next generation of retailing practices for several years developments since the beginning of 2020 have accelerated the need to take retailing to a new paradigm A singular focus now is the ever changing demands of the current and next generation of customers and employees and managing their values Examples of customer needs include a mobile first approach rich content augmented and personalized end to end services with seamless consistent and contextualized experiences While these concepts of retailing are not new the challenge has been in bringing them to reality due to a the constraints of legacy systems and processes while transitioning to next generation retailing systems b the inaccessibility of real time data coming from a wide variety of sources such as online shopping social media and operations c the inability to monitor real time behavior of customers and employees d the lack of effective collaboration and cooperation within the travel ecosystem and e the increasing lack of trust on the part of customers This book provides a framework and technologies to

convert retailing concepts from shopping to fulfillment into reality by a renovating an airline's core and ancillary products b progressing faster on digital and organizational transformation journeys to make better data based decisions about retailing c getting better at managing customer value by knowing who the customers are d empowering supporting and listening to employees to meet their expectations e asking the right questions to solve complex retailing problems relating to customers competitors and stakeholders and f questioning common held beliefs about the airline business This book is indispensable for all airline executives and senior managers as well as airline and airport commercial managers It will also be enormously beneficial for retailers dealing with airlines and airports Amazon the River for the First Time...
