Chhem, Kathryn M. Hibbert, Teresa van Deven, 2008-10-01 This is a book about scholarship in the broadest sense The writing of this book has shown how through scholarship we can bring together academics practitioners scientists radio logists and administrators from around the world to begin the kinds of conversations that promise to move us to a new way of thinking about and enacting radiology education Over the past century we have witnessed tremendous change in biomedical science and the scope of this change has demanded new approaches to medical education The most significant of the changes in medical education has been a fundamental paradigm shift from a teacher centered approach to a student centered approach This shift combined with the explosion of knowledge has pressed medical schools to undertake major curricular and institutional reform At the same time progress in medical education research methods has led to innovative approaches to support the improvement of learning methods and evaluation Over the past several years there has also been a shift toward thinking about and planning for medical education beyond the undergraduate level to include postgraduate and continuing medical education but also to consider learning within the professional environment and the development of professional continuous education Viewing medical education as a continuum that spans from the first year of medical school until retirement introduces new ways to conceptualize the teaching and learning needs that address lifelong learning demands that extend over 30 or 40 years **Quality and Safety in Radiology** Hani H. Image-Based Teaching Tara Catanzano, 2022-10-28 This book offers detailed information on a variety of teaching techniques for radiology Generational differences in communication and adult learning theory have led to changes in educational content delivery Traditional didactic teaching methods are no longer embraced by students requiring educators to learn and adopt new techniques Radiologists currently in practice have little or no experience with these newer techniques some thrust upon them abruptly by the COVID pandemic In addition to practicing radiologists the next generation of

educators are currently in training and often do not receive instruction on educational theory and teaching techniques. It is incumbent upon members of the educational sphere to provide resources for these individuals. This work intends to provide just such a resource. The objectives of the book include: Explaining adult learning theory and brain friendly teaching; Describing teaching techniques to leverage brain friendly teaching; Reinforcing key points with links to online video based lectures as an accompaniment to the text. Topics covered across chapters include helping non teaching faculty to teach writing high quality MCQ questions and teaching quality safety and professionalism. Each chapter will have one key takeaway chart at the conclusion of the chapter with high yield key points highlighted in a bulleted format. This is an ideal guide for practicing radiologists including those not currently working in academic centers. Faculty in non academic centers can specifically benefit from chapters related to medical student, clinician and patient education. Future academic radiologists, fellows and residents can benefit from the text as a foundation for careers in teaching hospitals and academic medical centers.
