book begins with the problems and goals of learning. It considers possible forms of distance learning looking at the variables involved, current examples of distance learning and possible future forms including examples from science fiction. It then investigates student interactions considering both frequency of interactions and the quality of each interaction. Programs developed in the Educational Technology Center at the University of California Irvine illustrate the critical idea of tutorial learning with computers. Production of tutorial learning material and costs for a student hour of learning is discussed. The book ends with suggestions for future progress. Current hardware and software is fully adequate for the tasks described. Development of all required learning units is a major activity. After this development, both better quality of learning and lower costs are very likely. Further experimental work is essential to understand the possibilities.

Multimodal Literacies Across Digital Learning Contexts Maria Grazia Sindoni, Ilaria Moschini, 2021-11-29 This collection critically considers the question of how learning and teaching should be conceived, understood and approached in light of the changing nature of learning scenarios and new pedagogies in this current age of multimodal digital texts, practices and communities. The book takes the concept of digital artifacts as being composed of multiple meaning-making semiotic resources such as visuals, music and design as its point of departure to explore how diverse communities interact with these tools and develop and explore their understanding of digital practices in learning contexts. The first section of the volume examines different case studies in which involved participants learn to grapple with the introduction of digital tools for learning in children's early years of schooling. The second section extends the focus to secondary and higher education settings as digital learning tools grow more complex as do students' parents and teachers' interactions with them and the subsequent need for new pedagogies to rethink these multimodal artifacts. A final section reflects on the implications of new multimodal tools, technologies and pedagogies for teachers such as on teacher training and community building among educators. In its in-depth look at multimodal approaches to learning as meaning-making in a digital world, this book will be of interest to students and scholars in multimodality, English language teaching, digital communication and education.

Teacher Acculturation Edward R. Howe, 2022-03-16 This book evolved from decades of transcultural experiences. Edward Howe's comparative ethnographic narrative, a blend of narrative inquiry and reflexive ethnography, uniquely captures the essence of teacher acculturation. Each

chapter is filled with intriguing teachers stories based on lived experiences connected through the common thread of learning to teach Compelling teacher narratives spanning seven decades show that much of what teachers do is learned implicitly and is culturally embedded Teacher Acculturation provides a window into the world of novice teachers from the 1950s through present day The thought provoking stories provide a springboard for critical discussions about gender sexuality culture race ethnicity Indigenous perspectives SES class religion location space time and the challenges facing teachers in different contexts The author highlights the importance of teacher relationships built on mutual understanding trust mentorship leadership and guidance Beginning teachers are largely required to work in isolation to learn their practice through trial and error left to sink or swim There is little provision for mentorship and insufficient time to reflect on teaching practices Collaborative and reflective self study as illustrated in Teacher Acculturation shows great promise to ameliorate this pervasive problem in teacher induction Thus the book will appeal to teacher educators teachers and to anyone interested in the fascinating lives of teachers
