The author, a former physical education teacher and now a principal, who continues to see inactive and overweight children year after year, explores how standard education ties into a lack of physical activity for many children. He also highlights how, instead of giving children with disabilities drugs to help them learn and behave, it can be more effective to incorporate physical movement into lessons. He also provides actual lesson plans that involve physical activity to meet Common Core standards. Make learning fun and help children gain an appreciation for physical fitness with the lessons, exercises, and activities in this guide. **Math from Three to Seven** Aleksandr Kalmanovich Zvonkin, 2011. This book is a captivating account of a professional mathematician's experiences conducting a math circle for preschoolers in his apartment in Moscow in the 1980s. As anyone who has taught or raised young children knows, mathematical education for little kids is a real mystery. What are they capable of? What should they learn first? How hard should they work? Should they even work at all? Should we push them or just let them be? There are no correct answers to these questions, and the author deals with them in classic math circle style: he doesn't ask and then answer a question but shows us a problem, be it mathematical or pedagogical, and describes to us what happened. His book is a narrative about what he did, what he tried, what worked, what failed, but most important, what the kids experienced. This book does not purport to show you how to create precocious high achievers. It is just one person's story about things he tried with

a half dozen young children Mathematicians psychologists educators parents and everybody interested in the intellectual development in young children will find this book to be an invaluable inspiring resource In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession Titles in this series are co published with the Mathematical Sciences Research Institute MSRI
