Ana Maths Grade 7:

Theory of Functional Differential Equations Jack K. Hale, 2012-12-06 Since the publication of my lecture notes *Functional Differential Equations* in the Applied Mathematical Sciences series many new developments have occurred. As a consequence it was decided not to make a few corrections and additions for a second edition of those notes but to present a more comprehensive theory. The present work attempts to consolidate those elements of the theory which have stabilized and also to include recent directions of research. The following chapters were not discussed in my original notes: Chapter 1 is an elementary presentation of linear differential difference equations with constant coefficients of retarded and neutral type; Chapter 4 develops the recent theory of dissipative systems; Chapter 9 is a new chapter on perturbed systems; Chapter 11 is a new presentation incorporating recent results on the existence of periodic solutions of autonomous equations; Chapter 12 is devoted entirely to neutral equations; Chapter 13 gives an introduction to the global and generic theory. There is also an appendix on the location of the zeros of characteristic polynomials. The remainder of the material has been completely revised and updated with the most significant changes occurring in Chapter 3 on the properties of solutions; Chapter 5 on stability; and Chapter 10 on behavior near a periodic orbit.
