HUMAN ANATOMY AND PHYSIOLOGY

Study of the human organism and its internal body

Anatomy

The study of the structure of the human body and its parts.

Physiology

The study of the function of the human body and its parts.

Structural levels

Studying the human body at the cellular, tissue, organ, and system levels.

- 1. **Cellular level** - study of the structure and function of cells.
- 2. **Tissue level** - study of the structure and function of tissues.
- 3. **Organ level** - study of the structure and function of organs.
- 4. **System level** - study of the structure and function of systems.
- 5. **Organism level** - study of the structure and function of the whole organism.

CELLS AND TISSUES

Cells are the basic units of structure and function of the human body.

Characteristics of cells

All cells are eukaryotic and have a nucleus.

Cells are specialized to perform specific functions.

Cells are surrounded by a cell membrane.

Cells are capable of self-renewal.

Cells are capable of communication.

Cells are capable of movement.

Cells are capable of responding to stimuli.

Cells are capable of maintaining homeostasis.

Cells are capable of reproducing.

Cells are capable of growing.

Cells are capable of dying.

NERVOUS SYSTEM

Functions

1. **Control** - The nervous system controls the body's activities.

2. **Integration** - The nervous system integrates information from the body and the environment.

3. **Communication** - The nervous system communicates with other parts of the body.

4. **Response** - The nervous system responds to stimuli from the environment.

5. **Regulation** - The nervous system regulates the body's internal environment.

6. **Coordination** - The nervous system coordinates the body's movements.

7. **Protection** - The nervous system protects the body from harm.

8. **Reproduction** - The nervous system is involved in reproduction.

9. **Growth** - The nervous system is involved in growth.

10. **Development** - The nervous system is involved in development.

11. **Survival** - The nervous system is involved in survival.

12. **Adaptation** - The nervous system is involved in adaptation.

13. **Evolution** - The nervous system is involved in evolution.

14. **Speciation** - The nervous system is involved in speciation.

15. **Diversification** - The nervous system is involved in diversification.

16. **Complexification** - The nervous system is involved in complexification.

17. **Integration** - The nervous system is involved in integration.

18. **Coordination** - The nervous system is involved in coordination.

19. **Regulation** - The nervous system is involved in regulation.

20. **Control** - The nervous system is involved in control.

21. **Integration** - The nervous system is involved in integration.

22. **Coordination** - The nervous system is involved in coordination.

23. **Regulation** - The nervous system is involved in regulation.

24. **Control** - The nervous system is involved in control.

NERVOUS SYSTEM

The nervous system is the body's communication system.

It consists of the brain, spinal cord, and nerves.

The brain is the control center of the nervous system.

The spinal cord is the main pathway for information between the brain and the rest of the body.

Nerves are bundles of axons that carry information between the brain, spinal cord, and the rest of the body.

The nervous system is responsible for controlling the body's activities.

It is involved in everything we do, from breathing to thinking.

The nervous system is the body's command center.

It tells the body what to do and when to do it.

The nervous system is the body's communication system.

It allows the body to respond to its environment.

The nervous system is the body's control system.

It keeps the body in balance and healthy.

The nervous system is the body's coordination system.

It makes sure the body's parts work together.

The nervous system is the body's regulation system.

It keeps the body's internal environment stable.

ORGAN SYSTEMS OF THE BODY

The body is made up of many different organ systems.

Each organ system has a specific function.

The organ systems work together to keep the body healthy.

There are many different types of organ systems.

Some organ systems are more important than others.

The organ systems are the body's building blocks.

They are the body's framework.

The organ systems are the body's support system.

They hold the body together.

The organ systems are the body's movement system.

They allow the body to move.

The organ systems are the body's energy system.

They provide the body with energy.
