Observing Human Traits Lab

Background: Physical **traits** are observable characteristics that are determined by genes. Genes are specific segments of DNA located on chromosomes that code for a particular trait. Most genes have two or more variations called **alleles**. Some alleles are **dominant** over others, and dominant alleles will be **expressed** (an organism's **phenotype** or physical appearance) over **recessive** alleles. Recessive alleles may be present in an organism but expression will be masked in the presence of a dominant allele for the same gene. Recessive traits will only be expressed when there are two recessive alleles present in the **genotype** (the "code").

Keep in mind that it's not always quite this simple. There are other factors that can affect trait expression, and most traits have several genes that influence expression. This lab is a basic introduction to dominant and recessive traits. Let's get started!

Directions: Circle the phenotype you have for each of the following human traits.
