

Usually the model number gives some clue as to the displacement of the engine and the year it was made. If in doubt about the year and model of your engine, refer any questions to a dealer. The horsepower for Johnson models should be given somewhere on the motor cover or dealer plate.

Specifications and clearances are given in Tables I through 8 at the end of the chapter.

SERVICE HINTS

The procedures used in this manual avoid the use of special tools and test equipment wherever possible. When necessary, special tools and test equipment are illustrated, either in actual use or alone. Special tools may be ordered and purchased through dealers. However, a well-equipped mechanic may find it possible to substitute similar tools or make new ones to fulfill a requirement.

Recommendations are occasionally made to refer a service task to a dealer or specialist in a particular field. In these cases, work will probably be done more quickly and economically than if the owner performs it personally.

When you order parts from the dealer or other parts distributor, always order by engine and chassis number. Write the numbers down and carry them in your wallet.

Throughout this manual, keep the following conventions in mind: "front" refers to the front of the boat, "left" and "right" or "port" and "starboard" refer to a person sitting in the boat facing forward. The abbreviation TDC means top-dead-center of a piston within a cylinder; BTC means before top-dead-center; A.TDC means after top-dead-center.

In procedural steps, the term "replace" means to discard a defective part and replace it with a new one. "Overhaul" means to remove, disassemble, inspect, measure, repair, or replace defective parts, reassemble, and install major systems and parts.

All dimensions and capacities are expressed in units familiar to an American mechanic. Metric measurements may also be given, as appropriate. Metric tools are not required to work on the various engines.

The terms **NOTE**, **CAUTION**, and **WARNING** have specific meaning in this book. A **NOTE** provides additional information to make a step or procedure easier or clearer. Disregarding a **NOTE** could cause inconvenience, but would not cause damage or personal injury.

A **CAUTION** emphasizes areas where equipment damage could result. Disregarding a **CAUTION** could cause permanent mechanical damage; however, personal injury is unlikely.

A **WARNING** emphasizes areas where personal injury or even death could result from negligence. Mechanical damage may also occur. **Warnings** are to be taken seriously. In some cases serious injury or death has been caused by mechanics disregarding similar warnings.

STANDARD PRACTICES

Experienced mechanics observe certain practices as a matter of course. Some of the following items are precautionary, others provide hints.

1. Disconnect battery positive (+) cable before repair operations in the vicinity of electrical connections, or those requiring electrical disconnections.
2. Be aware of flame or spark sources when working near a charging battery, or other areas involving volatile fluids, such as the fuel system.
3. Use the proper cleaning solution. External parts can be cleaned with solvent, unless they include rubber. Rubber parts can be cleaned with alcohol (or clean hydraulic brake fluid). Hot water and detergent is an excellent cleaning solution for the internal metal parts.
4. Tag all similar internal parts for location, and mark all mating parts for position. Record number and thickness of any discs upon disassembly.
5. Protect finished surfaces from physical damage and corrosion.
6. Freeze or very tight bolts and screws can often be loosened by soaking with penetrating oil then sharply striking the bolt head a few times with a hammer and punch (or screwdriver for screws). Use heat as a last resort, and be cautious of warping, removing temper, or melting any adjacent parts.
