

Ansoft RMxprt Application Note

A Three-phase Induction Motor Problem

This application note describes how to set up, solve, and analyze the results of a two-pole, three-phase induction motor using RMxprt. The model created by RMxprt will then be used as an input for EMPulse as a basis for performing more detailed analysis and for increasing the accuracy of the performance predictions.

RMxprt uses a combination of analytical and magnetic circuit equations to predict the performance of this three-phase induction motor. EMPulse is a nonlinear time-domain finite element analysis (FEA) software package that solves electromagnetic field equations, electric circuit equations, and equations of motion.

You can create the project from scratch or open the pre-solved project called **3ph.pjt**, in the **/ansoft/examples/rmxprt/** directory. If you are creating a project from scratch, select **Three Phase Induction Motor** as the motor type in RMxprt.

This project was created using version 2.3 of RMxprt and version 7.0 of the Maxwell 2D Field Simulator.
