Nelson Eby, 2016-04-20 Many geochemists focus on natural systems with less emphasis on the human impact on those systems Environmental chemists frequently approach their subject with less consideration of the historical record than geoscientists The field of environmental geochemistry combines these approaches to address questions about the natural environment and anthropogenic effects on it Eby provides students with a solid foundation in basic aqueous geochemistry before discussing the important role carbon compounds isotopes and minerals play in environmental issues He then guides students through how these concepts apply to problems facing our atmosphere continental lands and oceans Rather than broadly discussing a variety of environmental problems the author focuses on principles throughout the text leading students to understand processes and how knowledge of those processes can be applied to environmental problem solving A wide variety of case studies and quantitative problems accompany each chapter giving each instructor the flexibility to tailor the material to his/her course Many problems have no single correct answer illustrating the analytical nature of solving real world environmental problems *Glocalized Solutions for Sustainability in Manufacturing* Jürgen Hesselbach, Christoph Herrmann, 2011-03-19 The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 continues a long tradition of scientific meetings focusing on the exchange of industrial and academic knowledge and experiences in life cycle assessment product development sustainable manufacturing and end of life management The theme Glocalized Solutions for Sustainability in Manufacturing addresses the need for engineers to develop solutions which have the potential to address global challenges by providing products services and processes taking into account local capabilities and constraints to achieve an economically socially and environmentally sustainable society in a global perspective Glocalized Solutions for Sustainability in Manufacturing do not only involve products or services that are changed for a local market by simple substitution or the omitting of functions Products and services need to be addressed that ensure a high standard of living everywhere Resources required for manufacturing and use of such products are limited and not evenly distributed in the world Locally available resources local capabilities as well as local constraints have to be drivers for product and process innovations with respect to the entire life cycle The 18th CIRP International Conference on Life Cycle Engineering LCE 2011 serves as a platform for the discussion of the resulting challenges and the collaborative development of new scientific ideas

Incompressible Bipolar and Non-Newtonian Viscous Fluid Flow Hamid Bellout,Frederick Bloom,2013-11-19 The theory of incompressible multipolar viscous fluids is a non Newtonian model of fluid flow which incorporates nonlinear

viscosity as well as higher order velocity gradients and is based on scientific first principles The Navier Stokes model of fluid flow is based on the Stokes hypothesis which a priori simplifies and restricts the relationship between the stress tensor and the velocity By relaxing the constraints of the Stokes hypothesis the mathematical theory of multipolar viscous fluids generalizes the standard Navier Stokes model The rigorous theory of multipolar viscous fluids is compatible with all known thermodynamical processes and the principle of material frame indifference this is in contrast with the formulation of most non Newtonian fluid flow models which result from ad hoc assumptions about the relation between the stress tensor and the velocity The higher order boundary conditions which must be formulated for multipolar viscous flow problems are a rigorous consequence of the principle of virtual work this is in stark contrast to the approach employed by authors who have studied the regularizing effects of adding artificial viscosity in the form of higher order spatial derivatives to the Navier Stokes model A number of research groups primarily in the United States Germany Eastern Europe and China have explored the consequences of multipolar viscous fluid models these efforts and those of the authors which are described in this book have focused on the solution of problems in the context of specific geometries on the existence of weak and classical solutions and on dynamical systems aspects of the theory This volume will be a valuable resource for mathematicians interested in solutions to systems of nonlinear partial differential equations as well as to applied mathematicians fluid dynamicists and mechanical engineers with an interest in the problems of fluid mechanics

What AI Can Do Manuel

Cebral-Loureda, Elvira G. Rincón-Flores, Gildardo Sanchez-Ante, 2023-08-01 The philosopher Spinoza once asserted that no one knows what a body can do conceiving an intrinsic bodily power with unknown limits Similarly we can ask ourselves about Artificial Intelligence AI To what extent is the development of intelligence limited by its technical and material substrate In other words what can AI do The answer is analogous to Spinoza's Nobody knows the limit of AI Critically considering this issue from philosophical interdisciplinary and engineering perspectives respectively this book assesses the scope and pertinence of AI technology and explores how it could bring about both a better and more unpredictable future What AI Can Do highlights at both the theoretical and practical levels the cross cutting relevance that AI is having on society appealing to students of engineering computer science and philosophy as well as all who hold a practical interest in the technology
