

$$3(2x + 2) - 4(x - 5) = 18$$

$$6x + 6 - 4x + 20 = 18$$

$$6x - 4x + 6 + 20 = 18$$

$$2x + 26 = 18$$

$$2x + 26 - 26 = 18 - 26$$

$$2x = -8$$

$$\frac{2x}{2} = \frac{-8}{2}$$

$$x = -4$$

Check:

$$3(2x + 2) - 4(x - 5) = 18$$

$$3(2 \cdot -4 + 2) - 4(-4 - 5) = 18$$

$$18 = 18 \text{ 😊}$$

Original Problem – You have 2 sets of parenthesis with 2 terms inside - This means distribute twice!

Distribute both sets of parenthesis.

Rewrite the problem with like terms together. Take the sign in front of the term with it!

Combine like terms.
Now you have a two-step equation.

Subtract 26 from BOTH sides.

Now you have a one-step equation.

Divide by 2 on BOTH sides.

Solution: $x = -4$

Check your solution by substituting back into the original equation. Make sure both sides are equal.

Homotopy Analysis Method in Nonlinear Differential Equations presents the latest developments and applications of the analytic approximation method for highly nonlinear problems namely the homotopy analysis method HAM Unlike perturbation methods the HAM has nothing to do with small large physical parameters In addition it provides great freedom to choose the equation type of linear sub problems and the base functions of a solution Above all it provides a convenient way to guarantee the convergence of a solution This book consists of three parts Part I provides its basic ideas and theoretical development Part II presents the HAM based Mathematica package BVPh 1.0 for nonlinear boundary value problems and its applications Part III shows the validity of the HAM for nonlinear PDEs such as the American put option and resonance criterion of nonlinear travelling waves New solutions to a number of nonlinear problems are presented illustrating the originality of the HAM Mathematica codes are freely available online to make it easy for readers to understand and use the HAM This book is suitable for researchers and postgraduates in applied mathematics physics nonlinear mechanics finance and engineering Dr Shijun Liao a distinguished professor of Shanghai Jiao Tong University is a pioneer of the HAM

Calculus Howard Anton, Irl Bivens, Stephen Davis, 2022 *Calculus Early Transcendentals* 12th Edition delivers a rigorous and intuitive exploration of calculus introducing polynomials rational functions exponentials logarithms and trigonometric functions early in the text Using the Rule of Four the authors present mathematical concepts from verbal algebraic visual and numerical points of view The book includes numerous exercises applications and examples that help readers learn and retain the concepts discussed within This new adapted twelfth edition maintains those aspects of the previous editions that have led to the series success at the same provides freshness to the new edition that would attract new users IUTAM Symposium on Computational Methods for Unbounded Domains Thomas L. Geers, 2013-03-09 During 27-31 July 1997 thirty seven researchers in acoustics aeronautics elastodynamics electromagnetics hydrodynamics and mathematics participated in a Symposium on Computational Methods for Unbounded Domains The symposium was sponsored by the International Union of Theoretical and Applied Mechanics and was held at the University of Colorado in the United States of America The symposium was opened by Dr Richard Byrny Chancellor of the University's Boulder Campus who concluded his remarks by reading a letter from Professor Bruno A. Boley JUTAM Representative on the Scientific Committee Thirty three papers were presented About two thirds of these focused on the classical wave equation of acoustics however three papers dealt with hydrodynamic surface waves two with electromagnetic waves three with elastodynamic waves and four with waves in aerodynamics Approximately two thirds of the papers addressed steady state problems with the rest treating problems in the time domain Extended abstracts of the papers appear in this volume arranged in alphabetical order according to the last name of the presenting author A key unifying aspect of the symposium was the creation of four working groups that labored in parallel to formulate benchmark problems for evaluating computational boundaries The working groups reviewed the papers

presented each day searching for benchmark candidates Then they considered other possibilities and organized the ensemble into logical categories At the end of the symposium each group presented its benchmark candidates to the assembly of participants which subsequently made a preliminary consolidation of the benchmarks
