**LOCATING THE EPICENTER OF AN EARTHQUAKE**

Name \_\_\_\_\_

To figure out where an earthquake happened, you need to use the data recorded for the same earthquake from at least three seismograph stations. This data is recorded as a **seismogram**. You will also need a map, a ruler, a pencil, and a compass for drawing circles on the map.

**Sample Seismograms:**

Intervals are marked by the small lines printed just below the squiggles made by the seismic waves (the time may be marked differently by other seismographs). The distance between the beginning of the first P wave and the first S wave tells you how many seconds the waves are apart. This number will be used to tell you how far your seismograph is from the epicenter of the earthquake.
