FIGURE-1

FIGURE-2

GOAL: Perfect aim: Test 3 variables by changing the numbers or objects:

1. Play with the simulation for 5 to 10 minutes; observe and then start the activity. Find the combination of variables that hits the center of the target.
2. Then, decide the 3 variables you will focus on (see FIGURE-1). Write them down and draw a hypothesis about how this variable will affect or not the distance travelled (aim). Select diameter, mass, initial speed in the direction it is fired, angle, object or air resistance.
3. Change the variable one by one and record what happened. Complete the table below by listing what happened as you changed the variable by increasing or decreasing it; show results in values/ numbers.

4. Draw a conclusion in words and decide if the horizontal distance travelled is independent or dependent on the variable you changed.

Zemansky was published in 1949, it was revolutionary among calculus-based physics textbooks in its emphasis on the fundamental principles of physics and how to apply them. The success of University Physics with generations of several million students and educators around the world is a testament to the merits of this approach and to the many innovations it has introduced subsequently. In preparing this First Australian SI edition, our aim was to create a text that is the future of Physics Education in Australia. We have further enhanced and developed University Physics to assimilate the best ideas from education research with enhanced problem-solving instruction, pioneering visual and conceptual pedagogy, the first systematically enhanced problems, and the most pedagogically proven and widely used online homework and tutorial system in the world, Mastering Physics.
