that will help you connect children to mathematics in a way that is exciting and powerful **IPTVisions** ,2000 **Studying Programming** Sally Fincher,2006-02-13 We've written this book to support students in studying programming. It is not a text to teach any particular programming language but to be used alongside such a book or in conjunction with a taught course. In Studying Programming we concentrate on what other books consider too obvious or too basic. We explain the ideas that others assume you know; we describe the things that can make learning to program a frustrating experience if you don't know them. We stay with you through the process from starting with your very first blank screen to working on complex problems within a team. Studying Programming has been written by 9 members of the Computing Education Research Group at the University of Kent. All of us are practicing computing academics who also have a research interest in CS education. So we have a strong classroom background teaching students on a daily basis and a strong research background knowing what has been investigated and written on with regard to students' knowledge, conception and difficulties in introductory programming.
