Christopher J. Phillips,2014-12-04 An era of sweeping cultural change in America the postwar years saw the rise of beatniks
and hippies the birth of feminism and the release of the first video game It was also the era of new math Introduced to US
schools in the late 1950s and 1960s the new math was a curricular answer to Cold War fears of American intellectual
inadequacy In the age of Sputnik and increasingly sophisticated technological systems and machines math class came to be
viewed as a crucial component of the education of intelligent virtuous citizens who would be able to compete on a global
scale In this history Christopher J Phillips examines the rise and fall of the new math as a marker of the period s political and
social ferment Neither the new math curriculum designers nor its diverse legions of supporters concentrated on whether the
new math would improve students calculation ability Rather they felt the new math would train children to think in the right
way instilling in students a set of mental habits that might better prepare them to be citizens of modern society a world of
complex challenges rapid technological change and unforeseeable futures While Phillips grounds his argument in shifting
perceptions of intellectual discipline and the underlying nature of mathematical knowledge he also touches on long standing
debates over the place and relevance of mathematics in liberal education And in so doing he explores the essence of what it
means to be an intelligent American by the numbers Books and Pamphlets, Including Serials and Contributions to
