Learning Rates of Electric Vehicles Andreas Zerfaß, 2017-11-01 Governments of many countries consider the electrification of individual passenger transport as a suitable strategy to decrease oil dependency and reduce transport related carbon dioxide CO₂ and air pollutant emissions However battery electric vehicles BEVs and plug in hybrid electric vehicles PHEVs have been more expensive than their conventional counterparts and suffer from relatively short electric driving ranges which still hampers the market potential of these vehicles Despite persisting shortfalls mechanisms such as technological learning and economics of scale promise to improve the techno economic performance of BEVs and PHEVs in the short to mid term Here the author seeks to obtain insight into the techno economic prospects of BEVs and PHEVs by i establishing experience curves and ii quantifying user costs and the costs of mitigating carbon dioxide and air pollutant emissions in a time series analysis The analysis captures the situation in Germany between 2010 and 2016

Planning the Charging Infrastructure for Electric Vehicles in Cities and Regions Wirges, Johannes, 2016-08-15 Planning the charging infrastructure for electric vehicles EVs is a new challenging task This book treats all involved aspects charging technologies and norms interactions with the electricity system electrical installation demand for charging infrastructure economics of public infrastructure provision policies in Germany and the EU external effects stakeholder cooperation spatial planning on the regional and street level operation and maintenance and long term spatial planning

[The Electric Vehicle Revolution](#) Kevin A. Wilson, 2023-11-07 Explore the fascinating evolving world of electric vehicles from the first EVs in the Victorian era to their rapid expansion today and beyond In *The Electric Vehicle Revolution* automotive journalist Kevin Wilson provides a thorough engaging overview of where EV technology is today how it got there and where it s going Since the turn of the twenty first century EVs have gone from wonky who cares vehicles like GM s EV1 and early Teslas to every manufacturer s must have future Electric propulsion preceded fossil fuel cars by decades and even vied for prominence in the early twentieth century auto industry against both steam power and internal combustion engines From Electrobat an early New York taxi fleet through Columbia which had built 1 000 electric cars before either Henry Ford or Ransom Olds had built a single gasoline car viable business start ups in the early auto age were as competitive and innovative as those in early twenty first century Silicon Valley But it was not to be for electric cars in the early days of the 1900s as the auto industry evolved to favor gasoline cars thanks in part to the influence of the oil industry and the build out of infrastructure to supply fuel across the country Gas powered cars may have won the day but post WWII experiments with electric cars continued both within the established auto industry and from outside firms and visionaries including cars developed by General Electric Sears and the Henney Kilowatt alongside Ford and GM experimentals Rapidly evolving electronic technology beginning in the 1960s along with growing concerns about emissions and pollution set the stage for renewed interest in electric cars Improved batteries for cellphones laptops electronic controls computing and beyond provided the impetus for a wave of more

sophisticated and feasible electric vehicles including GM's EV1 and the first Teslas. Elon Musk's Tesla Motors proves the auto industry disruptor and sets the stage for responses by the mainstream auto industry including Nissan's Leaf, Chevrolet's Bolt and a host of high end EVs from companies like Audi, Jaguar and the like. Rival start-ups step in as well and government incentives, subsidies and regulatory demands all drive unprecedented development. Today the rush to electrify has nations and companies competing to see who can declare the earliest end to internal combustion engines but this radical transition won't be as easy as throwing a switch. *The Electric Vehicle Revolution* thoroughly explores the challenges of infrastructure, battery and vehicle tech and the cost to consumers as well as the long phase in as EVs are set to replace existing gas cars over decades. Whether you embrace EVs or have gasoline in your veins *The Electric Vehicle Revolution* provides a fascinating, engaging and stunningly illustrated overview of where the car world is today and where it's headed for the future. **Life**

Thermomanagement und Fahrerbeeinflussung Arthur Beitler, 2016 Gegenwärtig kann ein Zielkonflikt zwischen einer hohen Reichweite und geringen Anschaffungskosten bei Elektrofahrzeugen abgeleitet werden, da eine Erhöhung der Batteriekapazität zumeist mit einem Kostenanstieg verbunden ist. Ziel dieses Buches ist es, intelligente Maßnahmen mittels Thermomanagement und Fahrerbeeinflussung aufzuzeigen, durch die der Energieverbrauch eines BEV gezielt beeinflusst werden kann, um eine möglichst effiziente Energienutzung der Traktionsbatterie in BEV zu erreichen. Eine Minderung des Energieverbrauchs kann eine Verringerung der benötigten Batteriekapazität bei gleichbleibender Reichweite erlauben, wodurch Kostensenkungen bei BEV ermöglicht werden könnten. In diesem Buch wird eine Versuchsdurchführung zum Thermomanagement und zur Fahrerbeeinflussung ausgewählt. Anhand von aufgezeichneten Fahrtdaten werden die Energieverbräuche eines BEV und unterschiedliche Fahrstile dargestellt. Bei Vergleichsfahrten werden Aussagen zur eingesparten Energiemenge auf einer Teststrecke aufgezeigt. Hieraus werden besonders für Carsharing-Systeme, aber auch für private Besitzer eines BEV, Empfehlungen für Maßnahmen zur bewussten Energieoptimierung abgeleitet. **Cross-border**
