Environmental Influences on Dietary Intake of Children and Adolescents Jessica S. Gubbels, 2020-12-29 Childhood is a crucial period for establishing lifelong healthy nutritional habits. The environment has an important influence on children's dietary intake. This book focuses on the influence of environmental factors on the dietary intake of children and adolescents 0-18 years of age within various settings including home, early care and education, school, college, holiday clubs, neighborhoods, and supermarkets. The reported studies examine a variety of factors within these settings including the influence of cooking and parenting, teacher style, resources, and barriers within various settings, marketing, and many other factors. The dietary intake behaviors examined include snacking, fruit and vegetable intake, beverage intake, and also nutrition in general. In addition, several papers focus on problems caused by inadequate nutrition such as hunger and obesity. This work underlines the importance of the environment in influencing children's and adolescents' dietary intake. In addition, the papers identified some crucial barriers and facilitators for the implementation of environmental changes to enable a healthy diet for young children. Therefore, it provides some important directions for both future research and practice.

Social Determinants of Health in Non-communicable Diseases Katsunori Kondo, 2020-11-02 This book is open access under a CC BY-NC-ND 4.0 license. This open access book is the first compilation that reviews a wide range of social determinants of health (SDHs) for non-communicable diseases (NCDs) and healthy ageing in Japan. With the highest life expectancy and the largest elderly population in the world, Japan has witnessed health inequality by region and social class becoming more prevalent since the 2000s. The first half of this volume describes in detail major NCDs such as cancers, heart and kidney diseases, diabetes, stroke, and metabolic syndrome. The second half, on the other hand, explores various SDHs relating to healthy ageing. All chapters review and focus on SDHs, particularly health inequality associated with socio-economic status and social capital, which are widely addressed in the field of social epidemiology. The book makes the argument that Health for All, advocated by the WHO, should be implemented based on social justice and benefits for the greater society. Public health researchers and policymakers both in Japan and other nations will gain scientific evidence from this book to prepare for the coming era as ageing becomes a global issue.

Amino Acids in Nutrition and Health Guoyao Wu, 2021-07-12 This book explains about amino acids (AAs) which are not only building blocks of protein but are also signaling molecules as well as regulators of gene expression and the protein phosphorylation cascade. Additionally, AAs are key precursors for syntheses of hormones and low molecular weight nitrogenous substances, each having enormous biological importance. For example, physiological concentrations of AA metabolites, e.g., nitric oxide, polyamines, glutathione, taurine, thyroid hormones, and serotonin, are required for cell functions. Growing evidence shows that humans and animals have dietary requirements for all proteinogenic AAs. Mammals, birds, and fish also have species- and age-dependent needs for some AA-related substances. However, elevated levels of other products, e.g., ammonia, homocysteine, H₂S, and asymmetric dimethylarginine, are pathogenic factors for neurological disorders.

oxidative stress and cardiovascular disease Thus optimal amounts of AAs and their ratios in diets and circulation are crucial for whole body homeostasis and health Adequate provision of one or a mixture of functional AAs or metabolites may be beneficial for ameliorating health problems at various stages of the life cycle e g fetal growth restriction neonatal morbidity and mortality weaning associated intestinal dysfunction and wasting syndrome obesity diabetes cardiovascular disease the metabolic syndrome and infertility Dietary supplementation of these nutrients can also optimize the efficiency of metabolic transformations to enhance muscle growth milk production and athletic performance while preventing excess fat deposition and reducing adiposity Therefore functional AAs hold great promise in improving the growth health and well being of individuals
