Molecular Characterization of Humic Substances and Regulatory Processes Activated in Plants, 2nd edition Serenella Nardi, Luciano Pasqualoto Canellas, Andrea Ertani, Jose M Garcia-Mina, Diego Pizzeghello, Michela Schiavon, 2023-07-18 One of the main challenges of sustainable agriculture is improving food production while reducing significant impact on the soil water and other environmental resources In this context the use of humic substances extracted from different substrates in agricultural practices has been envisioned as a promising nature like and environmental friendly technology to support crop yield and quality Humic substances deriving from chemical and biological transformations of biota materials represent an intrinsic component of soil organic matter SOM consisting of associations of relatively small humic molecules linked together through hydrophobic interactions and hydrogen bonds Because of their distinctive physicochemical features they are used in several industrial and agricultural applications and in remediation technologies for metal contaminated soils Humic substances are of pivotal importance for environmental protection by conditioning soils and improving their stability and resistance to erosion In addition they possess inherent hormone like nature and exhibit biological activity This is often associated with complementary action of soil microbiota and is manifested in their capacity to modulate the transport and bioavailability of nutrients to plants influence root growth and architecture enhance crop yields and regulate the expression of a broad array of genes involved in plant metabolism development and resistance to stress Despite significant efforts to explain the molecular structure of humic substances and its relationship with a plurality of physiological responses and signalling networks triggered in plants several functional aspects still need to be clarified One major issue is that humic substances possess a very complex structure which accounts for their multifaceted biological action Therefore this Research Topic aims to update the knowledge on humic substances by improving the current understanding of their structure and interactions with plants and associated rhizosphere microorganisms thus shining light on the mechanisms and cellular signalling pathways through which humic substances target specific plant metabolic routes and elicit physiological responses Implications of such interactions are expected to be assessed using differential methodological approaches under either small scale trials or field conditions in view of developing advanced and sustainable agriculture technologies aimed at improving crop yield and food quality

Chang,2021-01-19 This book focuses on the disease aspects of classical swine fever CSF The epidemiological pattern of the reemergence of CSF from wild boars and its spread to neighboring domestic pigs provides useful information for policy makers The recent advances in diagnostics and vaccines and how each type of vaccine should be appropriately used in various field situations provide useful information for practicing veterinarians and laboratory scientists for example whether the vaccine virus attenuated enough to not cross the placenta to avoid sequelae how innocuous samples like serum should be cautiously treated to avoid risk of virus spread how various genotypes of the CSF virus evolve and compete to survive in the field and how the CSF virus molecularly manipulates normal cell biological processes for its own advantage to survive Phylogenetic analyses help in tracing the origin of the CSF virus responsible for each outbreak Overall readers should be impressed by the capabilities of CFS in pigs We hope that this book can be a useful reference for all colleagues whether in CSF free or CSF affected parts of the world **Advances in Legume Research** Diego Rubiales,Susana S. Araújo, Maria C. Vaz Patto,Nicolas Rispaill,2018-11-08 Legumes crops have an extraordinary importance for the agriculture and the environment In a world urgently requiring more sustainable agriculture food security and healthier diets the demand for legume crops is on the rise The International Legume Society <http://ilsnsseme.com> organizes a triannual series of conferences with the goal to serve as a forum to discuss interdisciplinary progress on legume research The Second International Legume Society Conference ILS2 hosted in October 2016 at Troia Portugal was the starting point for the Research Topic Advances in Legume Research in FiPS that was also open to spontaneous submissions Novel Insights Into Plant-Geminivirus Interactions Jose Trinidad Ascencio-Ibáñez,Alice Kazuko Inoue-Nagata,Rosa Lozano-Durán,Araceli G. Malaria Transmission Biology Rhoel Dinglasan,Matthias Marti,Isabelle Morlais,Brandon Keith Wilder,2021-01-22 The malaria parasite life cycle is complex and includes an obligatory developmental stage in its mosquito vector host This transition from human host to mosquito host to human host involves multiple developmental stages and divergent host tissues Over the years the research focus on the asexual stage parasites which causes the symptoms of the disease has transitioned towards a renewed focus on the transmission forms or gametocytes the only stages transmittable to the mosquito vector through ingestion of an infected blood meal Analysis of sporozoite liver interactions that result in the establishment of parasitic infection in the mammalian host has become an important research focus and we now have a greater appreciation of the fascinating development of the sporozoites of the mosquito midgut wall and its travel to the salivary glands prior to inoculation into the mammalian dermis This Research Topic embraces the full transition of the malaria parasite between its two obligatory hosts in what is termed as malaria transmission biology Of note are the critical enabling technologies and experimental systems that have been developed over the recent decade and have opened up significant new avenues for exploring the multi stage and multi step processes that comprise malaria transmission biology

From uncovering that gametocyte development occurs in the bone marrow to quantifying the influence of both human host metabolism and parasite genetics on mosquito infection it is clear that malaria transmission biology has entered an exciting era of discovery. Importantly, recent maturation of humanized liver mice and more sophisticated in vitro platforms have allowed more accurate recapitulations of the mosquito to skin to liver stages of human malaria infection. This allows both observation and study of the biological nuances of parasite vector to mammalian host transmission as well as interventions which can inhibit or block this stage of transmission. Paired with observations from clinical trials and the field we can better understand exactly which parameters in which systems are most relevant for translation and biology.
