

Organic Food Is Not a Cure for Environmental and Health Issues

✓ Exclusively available on IvyPanda

Organic food, defined as food produced with no chemical, has presented as a modern solution to the environmental damage caused by agriculture and a healthier alternative to conventional food. There have been claims that organic food may be a cancer cure and can eliminate the pesticides deposited into the environment by modern farming techniques. For consumers to separate the advertisement from the data, an analysis of the actual scientific findings regarding organic food is needed. Organic food is not better for the environment or nutrition as data supporting its benefits is limited; additionally, it has no proven effect on people's health.

First, there is not enough evidence to support the claim that organic farming is more beneficial to the environment. One of the selling points of organic food is the lack of synthetic pesticides used in production. However, there is evidence that to reach similar yields, farmers must use significantly more, albeit natural, pesticides. Melinda Wenner Moyer, a journalist and editor for Scientific American found that farms that use natural pesticides have to spray the produce nearly twice as often as non-organic farms (Moyer). Furthermore, the organic farms produced less than the non-organic farms, despite using significantly fewer pesticides. In a market economy, where a farm needs a competitive production to survive, organic farms would be forced to use significantly increased amounts of pesticides to compete. Natural pesticides, while less harmful than synthetic pesticides, are still damaging to the environment.

Moreover, organic farming would increase methane emissions argues a BBC article by Matt McGrath, an environmental correspondent. Organic farming of livestock produces significantly less food, which could lead to food shortages. Food imports would be required to make up for these shortages, increasing land use for agriculture worldwide. Animals raised using organic techniques yield less food, requiring more animals in general to meet food demands. The article argues that fully transitioning to this sort of farming would lead to a 21% increase in methane emissions in the UK alone (McGrath). Overall, organic food has no marked advantages over conventional food regarding environmental effects.
