

Summary: Aromaticity

Aromaticity is the term given to describe the unusual **stability** of benzene and related molecules. Not related to smells! 😊

- Benzene does not easily undergo **addition** like normal alkenes
- When benzene does undergo reaction, it tends to undergo **substitution** reactions
(and even then, often requires heating and addition of a catalyst)

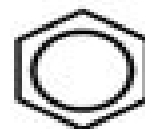

- The measured **resonance energy** of benzene is extremely high (36 kcal/mol) compared to conjugated alkenes like 1,3-cyclohexadiene (2 kcal/mol)
- Unlike dienes, which have alternating bond lengths, **all C-C bond lengths in benzene are identical** (1.40 Å)

Equivalent resonance structures
(not an equilibrium!)

Either structure for benzene is correct
and they can be used interchangeably

Hybrid of these two forms
sometimes drawn like this
to show that the pi-electrons
are "**delocalized**"

- The property of aromaticity is not unique to benzene

Aromatic Character and Aromaticity G. M. Badger,1969-01-02 Originally published in 1969 this book analyses the special properties of benzene and its derivatives which give them their distinct aromatic character The text first discusses the structure of benzene including the light shed on it by physical methods and wave mechanics and the structure of polycyclic benzenoid hydrocarbons and heterocyclic aromatic compounds Aromaticity is defined as a function of the electronic structure of the molecule or ion in question and it is shown that this has important consequences in respect of bond lengths resonance energies electronic absorption spectra and induced ring currents Final chapters discuss how far aromatic character and aromaticity are associated with non benzenoid hydrocarbons and with more complex systems

Aromaticity Peter J. Garratt,1986-04-25 Examines aromaticity through the historical and conceptual framework of simple molecular orbital theory This approach is unique in that theoretical considerations are integrated with experimental observations The criteria for aromatic antiaromatic and nonaromatic compounds are discussed in with reference to benzene cyclobutadiene and cyclooctatetraene Also includes a chapter on the likely classes of aromatic compounds
