Grounding Geographic Information in Perceptual Operations Simon Scheider, 2012 Geographic information reflects ontological world views just like any linguistic utterance. However, in comparison with spoken language, all kinds of digital information is affected by the problem of reference to an even larger extent because of the loss of the context of speech. How can the phenomena underlying digital information be referred to in an intersubjective way? The problem is not that machines cannot communicate but that humans frequently misunderstand each other when communicating via machines. This book puts forward a proposal about how semantic reference can be reproduced based on the operations necessary to generate a dataset. These include cognitive constructions as well as perceptual operations, i.e., operations of the human attentional apparatus. Perceptual operations allow one to share information by focusing human attention on Gestalts in the perceived space around the body. Gestalt mechanisms allow observers to make predications, i.e., to relate foci of attention. The author proposes a kind of practical constructivism guided by a formal language. The idea is to describe data bottom up in order to reconstruct the observation and abstraction process instead of presuming abstract ontological concepts. This approach is demonstrated by reconstructing the concept of a road network which underlies an important kind of geographic data.

Statistical Field Theory Giuseppe Mussardo, 2020 This textbook provides a thorough introduction to phase transitions and exactly solved models in statistical physics and quantum field theory. It covers a broad area from basic concepts of statistical physics and quantum mechanics to latest developments in low dimensional quantum field theories, phase transitions, and non-perturbative analysis.

Nuclear Science Abstracts, 1975-05 Thermal Processing of Packaged Foods S. Donald Holdsworth, Ricardo Simpson, 2015-11-30 This new edition discusses the physical and engineering aspects of the thermal processing of packaged foods and examines the methods which have been used to establish the time and temperature of processes suitable to achieve adequate sterilization or pasteurization of the packaged food. The third edition is totally renewed and updated, including new concepts and areas that are relevant for thermal food processing. This edition is formed by 22 chapters arranged in five parts that maintain great parts of the first and second editions. The First part includes five chapters analyzing different topics associated to heat transfer mechanism during canning process, kinetic of microbial death, sterilization criteria, and safety aspect of thermal processing. The second part, entitled Thermal Food Process Evaluation Techniques, includes six chapters and discusses the main process evaluation techniques. The third part includes six chapters treating subjects related with pressure in containers, simultaneous sterilization, and thermal food processing equipment. The fourth part includes four chapters including computational fluid dynamics and multi-objective optimization. The fifth part, entitled Innovative Thermal Food Processing, includes a chapter focused on two innovative processes used for food sterilization, such as high pressure with thermal sterilization and ohmic heating. *Thermal Processing of Packaged Foods Third Edition* is intended for a broad audience from undergraduate to postgraduate students, scientists, engineers, and professionals.

working for the food industry **Antenna Handbook** Y.T. Lo, S. W. Lee, 2013-06-29 Techniques based on the method of modal expansions the Rayleigh Stevenson expansion in inverse powers of the wavelength and also the method of moments solution of integral equations are essentially restricted to the analysis of electromagnetic radiating structures which are small in terms of the wavelength It therefore becomes necessary to employ approximations based on high frequency techniques for performing an efficient analysis of electromagnetic radiating systems that are large in terms of the wavelength One of the most versatile and useful high frequency techniques is the geometrical theory of diffraction GTD which was developed around 1951 by J B Keller 1 2 3 A class of diffracted rays are introduced systematically in the GTD via a generalization of the concepts of classical geometrical optics GO According to the GTD these diffracted rays exist in addition to the usual incident reflected and transmitted rays of GO The diffracted rays in the GTD originate from certain localized regions on the surface of a radiating structure such as at discontinuities in the geometrical and electrical properties of a surface and at points of grazing incidence on a smooth convex surface as illustrated in Fig 1 In particular the diffracted rays can enter into the GO shadow as well as the lit regions Consequently the diffracted rays entirely account for the fields in the shadow region where the GO rays cannot exist *Principles of Mathematics* Bertrand Russell, 2009-09-10 First published in 1903 *Principles of Mathematics* was Bertrand Russell's first major work in print It was this title which saw him begin his ascent towards eminence In this groundbreaking and important work Bertrand Russell argues that mathematics and logic are in fact identical and what is commonly called mathematics is simply later deductions from logical premises Highly influential and engaging this important work led to Russell's dominance of analytical logic on western philosophy in the twentieth century **Thermal Processing of Packaged Foods** S. Daniel Holdsworth, Ricardo Simpson, 2007-12-27 This is the second edition of Holdsworth and Simpson's highly practical work on a subject of growing importance in this age of convenience foods As before it discusses the physical and engineering aspects of the thermal processing of packaged foods and examines the methods which have been used to establish the time and temperature of processes to sterilize or pasteurize the food However there is lots of new material too Unlike other texts on thermal processing which cover very adequately the technology of the subject the unique emphasis of this text is on processing engineering and its relation to the safety of processed foods products Corridor of Hope Abol Hassan Danesh, 1999 *Corridor of Hope* describes and analyzes diverse forms of informal economic activities in the Western and Eastern Hemisphere with an emphasis on grassroots initiatives governmental control and regulation Abol Hassan Danesh unearths the intricacies of many of the activities loosely defined as informal economy He transcends the spatial and temporal aspects of informal economic enterprise to universalize the application of theory and methodological pedagogy of informal economy His thirty one sections on the informal economy create a viable alternative to formal economic institution while emphasizing the spontaneity and formlessness of the informal economy An understanding of informal economy as presented by the author will lead to a reevaluation of the unquestioned
