Tutorials in Radiotherapy Physics Patrick N. McDermott, 2016-08-19 The Topics Every Medical Physicist Should Know *Tutorials in Radiotherapy Physics* Advanced Topics with Problems and Solutions covers selected advanced topics that are not thoroughly discussed in any of the standard medical physics texts The book brings together material from a large variety of sources avoiding the need for you to search through and digest the vast research literature The topics are mathematically developed from first principles using consistent notation Clear Derivations and In Depth Explanations The book offers insight into the physics of electron acceleration in linear accelerators and presents an introduction to the study of proton therapy It then describes the predominant method of clinical photon dose computation convolution and superposition dose calculation algorithms It also discusses the Boltzmann transport equation a potentially fast and accurate method of dose calculation that is an alternative to the Monte Carlo method This discussion considers Fermi Eyring's theory which is widely used for electron dose calculations The book concludes with a step by step mathematical development of tumor control and normal tissue complication probability models Each chapter includes problems with solutions given in the back of the book Prepares You to Explore Cutting Edge Research This guide provides you with the foundation to read review articles on the topics It can be used for self study in graduate medical physics and physics residency programs or in vendor training for linacs and treatment planning systems

Atomistic Simulation of Anisotropic Crystal Structures at Nanoscale Jia Fu, 2019-05-10 Multiscale simulations of atomistic continuum coupling in computational materials science where the scale expands from macro micro to nanoscale has become a hot research topic These small units usually nanostructures are commonly anisotropic The development of molecular modeling tools to describe and predict the mechanical properties of structures reveals an undeniable practical importance Typical anisotropic structures e.g cubic hexagonal monoclinic using DFT MD and atomic finite element methods are especially interesting according to the modeling requirement of upscaling structures It therefore connects nanoscale modeling and continuous patterns of deformation behavior by identifying relevant parameters from smaller to larger scales These methodologies have the prospect of significant applications I would like to recommend this book to both beginners and experienced researchers
