

Genetic Engineering Summary Argumentative Essay Example

The history of genetic engineering goes back to the time when an Austrian MO and Gregory Mendel establish genetics as a scientific field. Soon other scientist followed his works and in 1944, McCann McCarty and Oswald Avery Colon McLeod disco Ever d that DNA was the carrier of genetic information. This discovery led to the ext nose research of DNA and it's properties.

In 1953, a goal was made with the breaks wrought science when Watson and Crick decoded the structure of the DNA.

Then in 1973, Herbert Borer and Stanley Cohen created a process of slicing DNA in half and imbibing it with other DNA parts. While adding in other genes, they were bal e to make bacteria reproduce. This technique was also used for making insulin.

Later in 1982, scientist successfully moved a gene from one fruit fly to another. This proved that moving genes from one species to another showed no threats. The history of genetic engineering never ceases to amaze me, but there can be harmful but helpful consequences to using genetic engineering.

There are many reasons to why genetic engineering on humans has a positive effect. One central reason is the fact that genetic engineering is a disease pre venation method. Some diseases like breast cancer and AIDS are passed down through heredity and genetic engineering can modify the DNA of a human to exclude or eliminate ate the passing along of the 'disease gene'.

Genetic field workers soon hope to copy t he DNA of humans and use science to prevent offspring from contracting terminal a ND fatal disease. This would mean humans would posses longevity without these harm muff diseases.

Another positive effect would be the plant and animal production a d the amount of profit made by producers. Genes play a major role in how much t h sees producers make.

If their chickens are not fit enough or if their corn is disease d, then in the markets the demand for the products will be less of a competitors to the other products. But genetic engineering can help this problem by altering the genes of this chicken to make them more healthier and change the genes of the corn that has a possible tainted diseases.

Therefore the producers have more profits in their pockets and have a better quality of products. Soon in the near future, producers will realize that keeping and removing genes can be help to improve the quality of products t hey sell to their consumers. With genetic engineering, producers can get rid of pest that adds to the problem of dying crops because the financial loss of the crops is devastate nag to the farmer and the starvation in countries that the farmer supplies to is an even g rater situation.

Lastly, genetic engineering can be used to clone any species.

By using g genetic engineering sheep, Dolly, was the first animal to be cloned which was from similar
