

Animal Testing

Argumentative Essay

Another animal lay dead on the table. Another victim of "research". Animal testing has proven an amazing way to learn how to cure various diseases, however it has come at a cost. Animal blood has been spilled so that we can survive. And even though it is useful, it is painful and harsh. Even though animal testing is a last resort and can help cure diseases, animal testing should not continue since the animals can die and don't get a choice.

Using animals for testing is amazing for us, but not so amazing for the animals on account of the fact that the animals can, and do, die. Knowing the fact that animals can help cure diseases prompts the fact that animals are often infected with said diseases so we can cure them, which, in turn, makes the animal go through the pain of the diseases and symptoms, which may kill them. According to paragraph 15 of "We Need to Stop Animal Testing", the author states, "Although humans often benefit from animal successful animal research, the pain, the suffering, and the deaths of animals are not worth the possible human benefits." This evidence shows how harsh the testing environments are and that the animals are not treated well. They are in pain, suffering through those procedures just so we can get more scientific research and more medicine to let us live. Animals are put through enough already, and dying to a test should not be one of them.

When testing starts, animals don't get to choose whether or not they are picked first to test on, or whether they're tested on at all. Scientist raise these animals in captivity for most of their lives and they don't get to see the wild. According to paragraph 17 of "We Need to Stop Animal Testing", the author states, "Yet animals rights are violated when they are used in research because

Argumentative Research Essay On Animal Testing:

Arguments about Animal Ethics Greg Goodale, Jason Edward Black, 2010-03-08 Bringing together the expertise of rhetoricians in English and communication as well as media studies scholars *Arguments about Animal Ethics* delves into the rhetorical and discursive practices of participants in controversies over the use of nonhuman animals for meat entertainment fur and vivisection Both sides of the debate are carefully analyzed as the contributors examine how stakeholders persuade or fail to persuade audiences about the ethics of animal rights or the value of using animals The essays in this volume cover a wide range of topics such as the campaigns waged by People for the Ethical Treatment of Animals including the sexy vegetarian and nude campaigns greyhound activists the Corolla Wild Horse Fund food manufacturers and the biomedical research industry as well as communication across the human nonhuman animal boundary and the failure of the animal rights movement to protest research into genetically modifying living beings *Arguments about Animal Ethics* insightful analysis of the animal rights movement will appeal to communication scholars as well as those interested in social change

Why Animal Experimentation Matters Ellen Frankel Paul, Jeffrey Paul, Animal experimentation has made a crucial contribution to many of the most important advances in modern medicine The development of vaccines for deadly viruses like rabies and yellow fever depended upon animal research and much of our basic knowledge about human health and physiology was discovered through the use of animals as well In spite of these gains animal rights activists have been zealous in communicating to the public and policymakers their view that the use of animals in medical research is morally wrong and should be severely curtailed or eliminated The activists arguments draw upon a range of disciplines and focus on both practical and ethical aspects of animal experimentation Advocates of animal experimentation have been slow to respond to these arguments Given that the worldwide toll of communicable diseases is still immense and that deadly new pathogens may emerge at any time in the future to menace human health failing to defend animal experimentation from the arguments of its opponents has disastrous implications A quick response to an unanticipated threat on the order of the AIDS epidemic is unimaginable absent a vigorous research establishment which in turn is dependent on animal proxies *Why Animal Experimentation Matters* is a first attempt by research scientists and moral philosophers to mount a convincing defense against animal rights enthusiasts Because opponents of animal experimentation come from a variety of intellectual backgrounds this defense is necessarily interdisciplinary as well In this collection of eight essays the authors scrutinize how animal experimentation actually functions in the laboratory the vital role that it plays in palliating and eradicating human and animal diseases and the moral justification for sacrificing animals for the betterment of human life The subjects covered in the essays include the moral status of animals and persons the importance of animals for advancing scientific knowledge the history of animal experimentation and of its detractors differing theoretical approaches of American and European animal experimentation regulations the heavily restrictive legislation promoted by animal rights activists and the threats posed to

research and researchers by violent animal rights zealots Contributors include Baruch Brody H Tristram Englehardt Jr R G Frey Kenneth F Kiple and Kriemhild Cone Ornelas Adrian R Morrison Charles S Nicoll and Sharon M Russell Jerrold Tannenbaum and Stuart M Zola This important anthology will be of interest to scientists philosophers individuals suffering from heritable or communicable diseases relatives of afflicted individuals and policymakers Ellen Frankel Paul is deputy director of the Social Philosophy and Policy Center professor of political science and philosophy at Bowling Green State University and editor in chief of the journal Social Philosophy both are professors of philosophy at Bowling Green State University

The Importance of Animal Experimentation for Safety and Biomedical Research S. Garattini, D.W. van Bekkum, 2012-12-06 Scientists are coming under increasing pressure from activist groups to stop animal experimentation branded as cruel and unnecessary for improving human health This attitude however stems from an unrealistic evaluation of the situation and distorted information about present scientific knowledge There is no question that most medical progress perhaps all in fact has been attained through knowledge derived initially from experiments in various animal species There is practically no way of replacing animals in these investigations and so called alternative methods are in reality merely complementary Tissue cultures cell microorganisms enzymes membranes mathematical models all are useful for preliminary screening tests and for testing hypotheses but the complexity of a living organism is such that in vivo studies are essential before any test can responsibly be made in man This book presents the proceedings of an international symposium organized in Strasbourg October 24 25 1988 with the aim of assessing present day requirements as regards animal experimentation in research related to major medical and toxicological problems still awaiting solutions

The Animal Rights Debate Carl Cohen, Tom Regan, 2001 Here for the first time the world's two leading authorities Tom Regan who argues for animal rights and Carl Cohen who argues against them make their respective case before the public at large The very terms of the debate will never be the same This seminal moment in the history of the controversy over animal rights will influence the direction of this debate throughout the rest of the century Visit our website for sample chapters
