Donnelly,2010-11-29

Transforming an Army at War examines the origins of the modular concept the reasons for undertaking it and the process for developing modular unit designs The Army had been exploring the notion of modularity since shortly after the end of the Cold War Modularity at its most basic was the idea for creating a pool of standardized self contained units combat support and headquarters that could plug into and unplug from unit formations as needed with minimal augmentation or reorganization A modular force would greatly improve the Army's ability to configure packages of units tailored for specific missions by the regional combatant commands By the summer of 2003 wars in Iraq and Afghanistan had markedly strained the Army General Peter J Schoomaker chief of staff of the Army as of 1 August 2003 believed that these operations along with the demands of an open ended Global War on Terror called for a major change in how the service organized its forces In early September 2003 he ordered the U S Army Training and Doctrine Command to begin the process of converting the Army to a modular brigade based force This would be the most far reaching transformation of the operational forces since World War II and the most radical since the Pentomic reorganization of the late 1950s The chief of staff identified the 3d Infantry Division scheduled to return to Iraq in early 2005 as the first formation to change to a modular structure He also directed that normal force development methods not be used Instead an ad hoc group Task Force Modularity would draw up the modular force plans By the time the task force disbanded in February 2005 most of the major design decisions for the modular force had been made and modular brigade combat teams of the 3d Infantry Division had deployed to Iraq This account of designing the modular force highlights a critical part of the Army's program to prepare itself for an increasingly turbulent world and illustrates the intellectual and organizational resources the service can call on in that effort

Operational Encirclements: Can The United States Military Decisively Follow Through? Major Scott Thomas,2015-11-06

This study is a historical analysis of how encirclement operations have been and still are important offensive operations. These operations need to be given priority in planning and execution by the United States Military. Encirclement operations have proven to be decisive military operations throughout history regardless of the composition and disposition of the enemy encircled. The U S military has maintained the decisive edge on the battlefield for over sixty years. Even with the benefits of technology, air supremacy, firepower, mobility, and maneuver, the U S military has not yet been completely successful in planning and executing encirclement operations. Today the U S military is arguably the best equipped and trained force in history. Even with this professional force, it is questionable whether the U S military could successfully execute an encirclement operation. Therefore, this monograph provides a historical examination as to why the U S military has been unable to reap the benefits of the offensive maneuver of encirclement. To accomplish this examination, this monograph conducts an analysis of four historical case studies: The Argentan Falaise Pocket, the Battle of Ia Drang, Doctrinal Revolution from 1986-2001, and Operation Anaconda. The analysis identifies the U S military has placed an over reliance on firepower to replace the maneuver of ground combat units. Secondly, this monograph also argues the U S military has placed too much emphasis on technology. This belief in technology has reduced the number of ground combat units employed in offensive operations. Additionally, U S military doctrine historically has not provided the foundation necessary to support and encourage the planning and execution of encirclement operations. These deficiencies together have prevented the U S military from capitalizing on the decisive nature resulting from the speed and shock of correctly executed encirclement operations.

A Military History of the Cold War, 1962-1991 Jonathan M. House, 2020-09-24. Study of the Cold War all too often shows us the war that wasn't fought. The reality of course is that many hot conflicts did occur, some with the great powers, weapons and approval, others without. It is this reality and this period of quasi war and semiconflict that Jonathan M House plumbs in *A Military History of the Cold War 1962-1991*, a complex case study in the Clausewitzian relationship between policy and military force during a time of global upheaval and political realignment. This volume opens a new perspective on three fraught decades of Cold War history, revealing how the realities of time, distance, resources, and military culture often constrained and diverted the inclinations or policies of world leaders. In addition to the Vietnam War and nuclear confrontations between the USSR and the United States, this period saw dozens of regional wars and insurgencies fought throughout Asia, Africa, and Latin America. Cuba, Pakistan, Indonesia, Israel, Egypt, and South Africa pursued their own goals in ways that drew the superpowers into regional disputes. Even clashes ostensibly unrelated to the politics of East-West confrontation, such as the Nigerian Biafran conflict, the Falklands/Malvinas War, and the Indonesian occupation of East Timor, involved armed forces, weapons, and tactics developed for the larger conflict and thus come under House's scrutiny. His study also takes up nontraditional or specialized aspects of the period, including weapons of mass destruction, civil-military relations, civil defense, and control of domestic disorders. The result is a single integrated survey and analysis of a complex period in
