Amateur Radio HF Antennas Claude Jollet, VE2DPE, The contents of this book are mostly aimed at the amateur radio beginner and aspiring ones Therefore this book provides answers to basic questions like What is the best HF antenna for my needs and location What type of stand alone antenna tuner should I use and which should I avoid How can I hide my HF antenna from the neighbors and still get acceptable performance from it What about lightning protection This book will supply immediately useful answers to the above questions and many more A properly designed and installed amateur radio HF antenna system can potentially make the humblest ham radio equipment perform like stations worth thousands of dollars We are confident that the antenna experimenter will find the information given here priceless Furthermore any ham radio operator armed with the information this book contains will become a much better informed buyer of commercially made HF antenna systems and accessories This special compendium edition is published in response to ham radio operators who wrote to ask that all the basic information on and related to amateur radio HF antennas be made available in one book instead of four arguing that it would be more convenient The author and publisher agree Therefore this edition contains the complete four book series on Amateur Radio HF Antennas published by Claude Jollet VE2DPE **The ARRL General Class License Manual** , **The Analytical Foundations of Loop Antennas and Nano-Scaled Rings** Arnold McKinley, 2019-03-27 This book develops the analytical theory of perfectly conducting and lossy metal circular round wire loop antennas and nano scaled rings from the radio frequency RF regime through infrared and the optical region It does so from an antenna theory perspective It is the first time that all of the historical material found in the literature has appeared in one place It includes particularly material that has appeared in the literature only in the last decade and some new material that has not yet been published The book derives the input impedance resonances and anti resonances the RLC circuit model representation and radiation patterns not only of closed loops and rings but also of loops and rings loaded randomly and multiply with resistive and reactive impedances Every derivation is compared with simulations run in Microwave Studio MWS It looks carefully at the physical response of loop antennas and nano rings coupled to a source at one point in the periphery and at such rings illuminated by a plane wave arriving from every different direction with the E field in all polarizations The book ends with a brief look at polygonal loops two dimensional arrays of nano rings and Yagi Uda arrays **The ARRL Antenna Book**
