help make it better Mobile Robots Janusz Będkowski,2011-12-02 The objective of this book is to cover advances of mobile robotics and related technologies applied for multi robot systems design and development Design of control system is a complex issue requiring the application of information technologies to link the robots into a single network Human robot interface becomes a demanding task especially when we try to use sophisticated methods for brain signal processing Generated electrophysiological signals can be used to command different devices such as cars wheelchair or even video games A number of developments in navigation and path planning including parallel programming can be observed Cooperative path planning formation control of multi robotic agents communication and distance measurement between agents are shown Training of the mobile robot operators is very difficult task also because of several factors related to different task execution The presented improvement is related to environment model generation based on autonomous mobile robot observations *Advances in Structural Engineering* Vasant Matsagar,2014-12-12 The book presents research papers presented by academicians researchers and practicing structural engineers from India and abroad in the recently held Structural Engineering Convention SEC 2014 at Indian Institute of Technology Delhi during 22-24 December 2014 The book is divided into three volumes and encompasses multidisciplinary areas within structural engineering such as earthquake engineering and structural dynamics structural mechanics finite element methods structural vibration control advanced cementitious and composite materials bridge engineering and soil structure interaction *Advances in Structural Engineering* is a useful reference material for structural engineering fraternity including undergraduate and postgraduate students academicians researchers and practicing engineers **Size- and Age-Related Changes in Tree Structure and Function** Frederick C. Meinzer,Barbara Lachenbruch,Todd E. Dawson,2011-06-29 Millions of trees live and grow all around us and we all recognize the vital role they play in the world's ecosystems Publicity campaigns exhort us to plant yet more Yet until recently comparatively little was known about the root causes of the physical changes that attend their growth Since trees typically increase in size by three to four orders of magnitude in their journey to maturity this gap in our knowledge has been a crucial issue to address Here at last is a synthesis of the current state of our knowledge about both the causes and consequences of ontogenetic changes in key features of tree structure and function During their ontogeny trees undergo numerous changes in their physiological function the structure and mechanical properties of their wood and overall architecture and allometry This book examines the central interplay between these changes and tree size and age It also explores the impact these changes can have at the level of the individual tree on the emerging characteristics of forest ecosystems at various stages of their development The analysis offers an explanation for the importance of discriminating between the varied physical properties arising from the nexus of size and age as well as highlighting the implications these ontogenetic changes have for commercial forestry and climate change This important and timely summation of our knowledge base in this area written by highly respected researchers will be of huge interest not only to researchers but also

to forest managers and silviculturists Modular Multilevel Converters with Interleaved Half-Bridge Submodules Aleksandr Viatkin, 2023-03-29 This book reports on a comprehensive study on a novel high power converter i.e. a Modular Multilevel Converter with Interleaved Half bridge Submodules ISM MMC. It describes in depth its average model, the operating principles as well as a new control method and a hybrid modulation strategy that help to exploit the benefits of the interleaving scheme. The new power converter is particularly advantageous for high current applications that require superb quality of input/output waveforms. Moreover, this book reports on a systematic study of the current balancing problem between parallel connected units that commute in non simultaneous fashion. This is a typical issue in interleaved converters; however, here it is analyzed for the first time in relation to MMC based structures. Two control strategies are proposed to cope with this matter. By using a sensorless regulation scheme, the number of required current transducers has been minimized, reducing complexity, cost, and footprint of the hardware while providing converter with a fast and accurate current balancing. This book also offers a comprehensive comparison between several practical designs of ISM MMC and classical MMC for an ultra fast electrical vehicle charger. All in all, it provides graduate students and researchers as well as field engineers and professionals with extensive information and essential practical details on the state of the art MMC and ISM MMC design. **Environmental Health Perspectives**, 2010 *Challenges and Opportunities for the EU Common Fisheries Policy Application in the Mediterranean and Black Sea* Simone Libralato, Francesco Colloca, Ali Cemal

Gücü, Christos D. Maravelias, Cosimo Solidoro, Sebastián Villasante, Massimiliano Cardinale, 2019-01-11 The application of the Common Fisheries Policy (CFP) in the Mediterranean and Black Sea faces several challenges also because of large ecological, economic, political, and institutional differences across the basin. The challenge of CFP application is exacerbated by the legal administrative situation with large areas outside national EU jurisdictions by the different development of fisheries that result in fleet capacities highly different on opposite shores of some sub-basins as well as by uneven monitoring and data availability across the basins that result in situations that hamper sustainable management. This book collates analyses related to the application of the principles included in the CFP in the Mediterranean and Black Sea, including assessments of current status, scenario analyses, visions of best solutions, evaluation of critical hot spots, and effects of regionalization of fisheries management. The eBook tackles from local to transboundary issues and solutions and provides a broad vision of problems together with important practical solutions for CFP application in the Mediterranean and Black Sea.
