Modern Trends in Algebra and Representation Theory David Jordan, Nadia Mazza, Sibylle Schroll, 2023-08-17 Aimed at graduate students and non experts this text gives a guided tour of modern developments in algebra and representation theory

Nine Mathematical Challenges: An Elucidation A. Kechris, N. Makarov, D. Ramakrishnan, X. Zhu, 2021-09-24 This volume stems from the Linde Hall Inaugural Math Symposium held from February 22-24, 2019 at California Institute of Technology Pasadena California The content isolates and discusses nine mathematical problems or sets of problems in a deep way but starting from scratch Included among them are the well known problems of the classification of finite groups the Navier Stokes equations the Birch and Swinnerton Dyer conjecture and the continuum hypothesis The other five problems also of substantial importance concern the Lieb Thirring inequalities the equidistribution problems in number theory surface bundles ramification in covers and curves and the gap and type problems in Fourier analysis The problems are explained succinctly with a discussion of what is known and an elucidation of the outstanding issues An attempt is made to appeal to a wide audience both in terms of the field of expertise and the level of the reader

Macdonald Theory and Beyond Daniel Orr, Joshua Jeisheng Wen, 2025-03-27 This volume contains the proceedings of the AMS Special Session on Macdonald Theory and Beyond Combinatorics Geometry and Integrable Systems held virtually on March 19-20, 2022 The articles in this volume represent a number of recent developments in the theory of Macdonald polynomials while highlighting some of its many connections to other areas of mathematics An important common thread throughout the volume is the role of combinatorial formulas for Macdonald polynomials themselves as well as operations on them arising from rich additional structures The articles of Haglund Mandelshtam and Romero concern the type A Macdonald polynomials which remain a major focus of the subject due to the depth of their combinatorial theory and the power of their specific applications For arbitrary type Macdonald polynomials a new combinatorial formula with pseudo crystal structure is presented in the article of Lenart Naito Nomoto and Sagaki Finally the articles of Saied and Wen take up two important new directions in the subject the SSV polynomials arising from the study of special functions on metaplectic groups and the wreath Macdonald polynomials associated with certain symplectic resolutions

Hyperidentities: Boolean And De Morgan Structures Yuri Movsisyan, 2022-09-20 Hyperidentities are important formulae of second order logic and research in hyperidentities paves way for the study of second order logic and second order model theory This book illustrates many important current trends and perspectives for the field of hyperidentities and their applications of interest to researchers in modern algebra and discrete mathematics It covers a number of directions including the characterizations of the Boolean algebra of n -ary Boolean functions and the distributive lattice of n -ary monotone Boolean functions the classification of hyperidentities of the variety of lattices the variety of distributive modular lattices the variety of Boolean algebras and the variety of De Morgan algebras the characterization of

algebras with aforementioned hyperidentities the functional representations of finitely generated free algebras of various varieties of lattices and bilattices via generalized Boolean functions De Morgan functions quasi De Morgan functions super Boolean functions super De Morgan functions etc the structural results for De Morgan algebras Boole De Morgan algebras super Boolean algebras bilattices among others While problems of Boolean functions theory are well known the present book offers alternative more general problems involving the concepts of De Morgan functions quasi De Morgan functions super Boolean functions and super De Morgan functions etc In contrast to other generalized Boolean functions discovered and investigated so far these functions have clearly normal forms This quality is of crucial importance for their applications in pure and applied mathematics especially in discrete mathematics quantum computation quantum information theory quantum logic and the theory of quantum computers

Languages and Automata Benjamin Steinberg, 2024-10-21 This reference discusses how automata and language theory can be used to understand solutions to solving equations in groups and word problems in groups Examples presented include how Fine scale complexity theory has entered group theory via these connections and how cellular automata has been generalized into a group theoretic setting Chapters written by experts in group theory and computer science explain these connections

Advances in the Theory of Numbers Ayşe Alaca, Şaban Alaca, Kenneth S. Williams, 2015-10-28 The theory of numbers continues to occupy a central place in modern mathematics because of both its long history over many centuries as well as its many diverse applications to other fields such as discrete mathematics cryptography and coding theory The proof by Andrew Wiles with Richard Taylor of Fermat's last theorem published in 1995 illustrates the high level of difficulty of problems encountered in number theoretic research as well as the usefulness of the new ideas arising from its proof The thirteenth conference of the Canadian Number Theory Association was held at Carleton University Ottawa Ontario Canada from June 16 to 20 2014 Ninety nine talks were presented at the conference on the theme of advances in the theory of numbers Topics of the talks reflected the diversity of current trends and activities in modern number theory These topics included modular forms hypergeometric functions elliptic curves distribution of prime numbers diophantine equations L functions Diophantine approximation and many more This volume contains some of the papers presented at the conference All papers were refereed The high quality of the articles and their contribution to current research directions make this volume a must for any mathematics library and is particularly relevant to researchers and graduate students with an interest in number theory The editors hope that this volume will serve as both a resource and an inspiration to future generations of researchers in the theory of numbers

Geometry of Moduli Spaces and Representation Theory Roman Bezrukavnikov, Alexander Braverman, Zhiwei Yun, 2017-12-15 This book is based on lectures given at the Graduate Summer School of the 2015 Park City Mathematics Institute program Geometry of moduli spaces and representation theory and is devoted to several interrelated topics in algebraic geometry topology of algebraic varieties and representation theory Geometric representation theory is a young but

fast developing research area at the intersection of these subjects An early profound achievement was the famous conjecture by Kazhdan Lusztig about characters of highest weight modules over a complex semi simple Lie algebra and its subsequent proof by Beilinson Bernstein and Brylinski Kashiwara Two remarkable features of this proof have inspired much of subsequent development intricate algebraic data turned out to be encoded in topological invariants of singular geometric spaces while proving this fact required deep general theorems from algebraic geometry Another focus of the program was enumerative algebraic geometry Recent progress showed the role of Lie theoretic structures in problems such as calculation of quantum cohomology K theory etc Although the motivation and technical background of these constructions is quite different from that of geometric Langlands duality both theories deal with topological invariants of moduli spaces of maps from a target of complex dimension one Thus they are at least heuristically related while several recent works indicate possible strong technical connections The main goal of this collection of notes is to provide young researchers and experts alike with an introduction to these areas of active research and promote interaction between the two related directions
