

## Dividing Polynomials

**Divide Polynomials by Monomials** To divide a polynomial by a monomial, divide each term of the polynomial by the monomial.

**Example 1** Find  $(4r^2 - 12r) \div (2r)$ .

$$\begin{aligned}(4r^2 - 12r) \div 2r &= \frac{4r^2 - 12r}{2r} \\ &= \frac{4r^2}{2r} - \frac{12r}{2r} && \text{Divide each term.} \\ &= \frac{\cancel{4}r^{\cancel{2}}}{\cancel{2}r} - \frac{\cancel{12}r^{\cancel{1}}}{\cancel{2}r} && \text{Simplify.} \\ &= 2r - 6 && \text{Simplify.}\end{aligned}$$

**Example 2** Find  $(3x^2 - 8x + 4) \div (4x)$ .

$$\begin{aligned}(3x^2 - 8x + 4) \div 4x &= \frac{3x^2 - 8x + 4}{4x} \\ &= \frac{3x^2}{4x} - \frac{8x}{4x} + \frac{4}{4x} \\ &= \frac{\cancel{3}x^{\cancel{2}}}{\cancel{4}x} - \frac{\cancel{8}x}{\cancel{4}x} + \frac{4}{4x} \\ &= \frac{3x}{4} - 2 + \frac{1}{x}\end{aligned}$$

**Thinking Algebraically: An Introduction to Abstract Algebra** Thomas Q. Sibley, 2021-06-08 Thinking Algebraically presents the insights of abstract algebra in a welcoming and accessible way It succeeds in combining the advantages of rings first and groups first approaches while avoiding the disadvantages After an historical overview the first chapter studies familiar examples and elementary properties of groups and rings simultaneously to motivate the modern understanding of algebra

The text builds intuition for abstract algebra starting from high school algebra. In addition to the standard number systems, polynomials, vectors, and matrices, the first chapter introduces modular arithmetic and dihedral groups. The second chapter builds on these basic examples and properties, enabling students to learn structural ideas common to rings and groups, isomorphism, homomorphism, and direct product. The third chapter investigates introductory group theory. Later chapters delve more deeply into groups, rings, and fields, including Galois theory, and they also introduce other topics such as lattices. The exposition is clear and conversational throughout. The book has numerous exercises in each section as well as supplemental exercises and projects for each chapter. Many examples and well over 100 figures provide support for learning. Short biographies introduce the mathematicians who proved many of the results. The book presents a pathway to algebraic thinking in a semester or year-long algebra course. *Advanced Algebra with the TI-89* Brendan Kelly, 2000 **Elementary**

**Abstract Algebra, Examples and Applications Volume 1: Foundations** Justin Hill, Christopher Thron, 2018-08-22 This book is not intended for budding mathematicians. It was created for a math program in which most of the students in upper level math classes are planning to become secondary school teachers. For such students, conventional abstract algebra texts are practically incomprehensible both in style and in content. Faced with this situation, we decided to create a book that our students could actually read for themselves. In this way, we have been able to dedicate class time to problem solving and personal interaction rather than rehashing the same material in lecture format. Advanced Linear Algebra Nicholas A. Loehr, 2024-06-21 Designed for advanced undergraduate and beginning graduate students in linear or abstract algebra. *Advanced Linear Algebra* covers theoretical aspects of the subject along with examples, computations, and proofs. It explores a variety of advanced topics in linear algebra that highlight the rich interconnections of the subject to geometry, algebra, analysis, combinatorics, numerical computation, and many other areas of mathematics. The author begins with chapters introducing basic notation for vector spaces, permutations, polynomials, and other algebraic structures. The following chapters are designed to be mostly independent of each other so that readers with different interests can jump directly to the topic they want. This is an unusual organization compared to many abstract algebra textbooks which require readers to follow the order of chapters. Each chapter consists of a mathematical vignette devoted to the development of one specific topic. Some chapters look at introductory material from a sophisticated or abstract viewpoint, while others provide elementary expositions of more theoretical concepts. Several chapters offer unusual perspectives or novel treatments of standard results. A wide array of topics is included, ranging from concrete matrix theory, basic matrix computations, determinants, normal matrices, canonical forms, matrix factorizations, and numerical algorithms to more abstract linear algebra, modules, Hilbert spaces, dual vector spaces, bilinear forms, principal ideal domains, universal mapping properties, and multilinear algebra. The book provides a bridge from elementary computational linear algebra to more advanced abstract aspects of linear algebra needed in many areas of pure and applied mathematics.
