

above. Then calculate the student's predicted values and residuals.

A, age in years	2	3	3	4	4	4	5	5	5	6
H, height in inches	30	33	34	37	35	38	40	42	43	42
Predicted Values										
Residuals	0	-1.5	0.5	0	-2	1	-1.5	1.5	2.5	-2

3. Use the graph below to make a residual plot.

4. Use your residual plot to discuss how well the student's line fits the data.

pretty good but goes out of track

5. Use the student's line to predict the height of a 20-year-old man. Discuss the reasonableness of the result.

No, the line can't go that far

Galois Connections and Applications K. Denecke,M. Ern ,S.L. Wismath,2013-11-11 Galois connections provide the order or structure preserving passage between two worlds of our imagination and thus are inherent in hu man thinking wherever logical or mathematical reasoning about cer tain hierarchical structures is involved Order theoretically a Galois connection is

given simply by two opposite order inverting or order preserving maps whose composition yields two closure operations or one closure and one kernel operation in the order preserving case Thus the hierarchies in the two opposite worlds are reversed or transported when passing to the other world and going forth and back becomes a stationary process when iterated The advantage of such an adjoint situation is that information about objects and relationships in one of the two worlds may be used to gain new information about the other world and vice versa In classical Galois theory for instance properties of permutation groups are used to study field extensions Or in algebraic geometry a good knowledge of polynomial rings gives insight into the structure of curves surfaces and other algebraic varieties and conversely Moreover restriction to the Galois closed or Galois open objects the fixed points of the composite maps leads to a precise duality between two maximal subworlds
