on both an extensive review of the literature and on its author's long experience in the testing field. It is very timely in this era of burgeoning testing programs especially when these items are delivered in a computer-based environment. Key features include Comprehensive and Flexible. No other book so thoroughly covers the field of test item development and its various applications. Focus on Validity. Validity, the most important consideration in testing, is stressed throughout and is based on the Standards for Educational and Psychological Testing currently under revision by AERA, APA, and NCME. Illustrative Examples. The book presents various selected and constructed response formats and uses many examples to illustrate correct and incorrect ways of writing items. Strategies for training item writers and developing large numbers of items using algorithms and other item-generating methods are also presented. Based on Theory and Research. Nature-based Solutions for Circular Management of Urban Water, Alexandros Stefanakis, Hasan Volkan Oral, Cristina Calheiros, Pedro Carvalho, 2024-03-12. Despite the strong economic growth of the last decades, our modern global society is facing the existential threat of climate change. It is now realized that the linear economic model is not sustainable in the long run and cannot sustain the life standards. The new circular economy approach that is already under discussion suggests the adjustment of our priorities and the re-orientation of the future infrastructure investments. In this context, we are looking for new innovative and sustainable solutions to increase the resiliency of our societies to protect

and restore the ecosystems and to maintain the necessary economic growth without further undermining the planet's boundaries. The well-being of coming generations will depend on our ability to adapt our economies to this challenge. In particular, transforming today's cities into sustainable cities is one of the main adaptations that will be necessary. A holistic approach looking at cities from a system's perspective is needed to achieve this goal. Nature-based solutions (NbS) serve exactly this ambitious and multi-factorial purpose due to their inherent ability not only to tackle climate change but also to provide a series of ecosystem services and social benefits. In the urban context, NbS can deal with main challenges such as urban heat islands, flooding, treatment of wastewater and runoff, and food provision. At the same time, NbS can provide a series of ecosystem services beneficial for the environment and the society, including clean water production, nutrient recovery, heavy metals retention, and a broad range of plant-based materials. In the new circular economy paradigm, NbS can contribute to strategies for climate change adaptation and create a holistic resource management system for the urban biosphere. Thus, this book aims at providing a single reference that discusses the role and effectiveness of NbS in the urban environment and how these systems can contribute to the circular management of water, nutrients, and resources towards resilient, sustainable, and healthy cities. The scope of the book extends to various fields and disciplines such as the built environment, urban water and wastewater resource recovery, urban farming, smart sensing, research and development, technology and innovation, society and governance. Research studies, pilot projects, and case studies are part of the book.

Biochemistry Terry

Brown, 2016-09-22. Biochemistry is a major new textbook designed and created specifically for briefer courses in the subject. Written by Prof Terry Brown of the University of Manchester, author of Genomes and Gene Cloning, the book provides the necessary detail and rigour expected for these courses but without the extraneous material found in the larger textbooks. With an increasing number of students taking a short course in biochemistry, there is a growing need for a book that covers the subject concisely and succinctly. Biochemistry has been designed from the outset for these shorter courses; it is not a cut-down version of one of the larger books that dominate the market. Although it is shorter, there is no compromise in content, style, and coverage. The book is attractively designed in full colour throughout with all the pedagogical features expected in a major textbook. It covers what students should be expected to know and is written in the clear and accurate writing style for which Terry Brown is widely lauded. With its competitive price and resources for adopting lecturers, all of the illustrations and diagrams from the book, and answers to the end-of-chapter questions, Biochemistry will become the textbook of choice for any brief biochemistry course. Confirmed Adoptions: Biochemistry is already the required text at the following institutions: Becker College, USA; Bishop Burton College, UK; Bournemouth University, UK; Charles R Drew University of Medicine and Science, USA; Charleston Southern University, USA; Colorado State University Pueblo, USA; Idaho State University, USA; Liverpool John Moores University, UK; Montclair State University, USA; Newcastle University, UK; Rivier University, USA; Southeast Missouri State University, USA; Staffordshire University, UK; Stephen F Austin State University, USA; Texas Christian University, USA; The
