Toyota's sustained growth attracts the attention of economists and industrialists around the world, eager to learn the secrets of Toyota's lasting success. In *Inside the Mind of Toyota: Management Principles for Enduring Growth*, Satoshi Hino examines the source of Toyota's strength, the fundamental thinking and management structures that lie beneath the creation of its famed Toyota Production System. From the perspective of a professional with 30 years experience in the auto industry, Hino presents a fresh and detailed analysis of Toyota's essential management system from its very beginnings into the 21st century. The ultimate goal is not simply to mimic Toyota's formula but to learn from it and in doing so surpass it. From the Translator's Foreword: Unlike most Toyota watchers, Hino urges us to set our sights not on replicating Toyota's success but on surpassing it. This point is crucial because it moves our attention away from slavish imitation of what is visible on the surface and challenges us to tap into deeper and more powerful mechanisms of excellence. This is not a cookbook and it is not Toyota Lite. It deserves serious study, application and experimentation. Learn how Toyota thinks. Hino is telling us. Learn Toyota's strengths, make them your own and then exceed them. Global Value Chains in a Postcrisis World Olivier Cattaneo, Gary Gereffi, Cornelia Staritz, 2010-09-13. This book looks to address the following questions in a post-crisis world: How have lead firms responded to the crisis? Have they changed their traditional supply chain strategy and relocated and/or outsourced part of their production? How will those changes affect developing countries? What should be the policy responses to these changes?

Metal Matrix Composites S.A. Gieskes, M. Terpstra, 2012-12-06. The present study of patents and patent applications published in the United States, Japan, and the countries of Western Europe and of other technological areas about 1980 is the result of a comprehensive analysis of literature published since documents which reveal various processes for reinforcing composite materials by metals, the atoms of which have been arranged according to predetermined matrices. Pre-searches were conducted by the Patent Information Office of TNO in Rijswijk, The Netherlands, which also provided copies of the documents needed to carry out the analysis. The International Patent Classification System (IPC) was employed to determine proper entries to the documents on the respective subject matter. These classes are C 22 C 1 09 relating to alloys containing metallic or non-metallic fibres or filaments by subjecting to pressure and heat an assembly comprising at 09B least one metal layer or sheet and one layer of fibres or filaments; 09C by contacting the filaments or fibres with molten metal, e.g. by impregnation; 09D by using a powder metallurgical method characterized by the material used respectively for the metal; 09F matrix or the reinforcing fibres matrix formed of a light metal such as Al, Mg, Be, Ti; 09F2 matrix formed of a refractory metal such as Ni, Co, Cr, Mo; 09F4. Classifying patents or patent applications is actually a very difficult matter, particularly when it has to deal with processes for the production of composites, metal alloys, or pharmaceuticals.
