

5. **Think and discuss:** When we look at a leaf, we see the colors of light that are reflected off its surface. How does this explain the relatively low flow of oxygen in green light?

It demonstrates that it reflects the necessary light. Additionally, some colors have a higher photosynthesis rate than green, which means that color doesn't have the highest photosynthesis rate.

Extension:

Limiting factors

Get the Gizmo ready:

- Select the **WHITE** tab and the **BAR CHART** tab.
- Turn on **Show numerical values**.

Introduction: Photosynthesis requires light, water, and CO_2 to work. When one of these factors is in short supply, it is called a **limiting factor**. Temperature can also be a limiting factor when it is too hot or too cold for photosynthesis to work well.

Question: What is the effect of limiting factors on photosynthesis?

1. **Observe:** Set Temperature to 24°C , Light intensity to 50%, and CO_2 level to 200 ppm.

- A. Move the **Temperature** slider up and down. Were you able to increase oxygen production? (Return the slider to 24°C when finished.)
- B. Move the **Light intensity** slider back and forth. Were you able to increase oxygen production? (Return the slider to 50% when finished.)
- C. Move the **CO_2 level** slider back and forth. Were you able to increase oxygen production? (Return the slider to 200 ppm when finished.)

Only a decline or a hold steady in oxygen production was possible; not an increase.

Only a decline or stability, not an increase, in oxygen production was possible.

When the CO_2 levels increased the oxygen production increased.

2. **Analyze:** In this situation, what was the limiting factor?

The CO_2 was the limiting factor

How do you know?

Because only changes in CO_2 levels would have an impact on the generation of oxygen
