Lesson 24 Circulatory and Respiratory Systems

Can you imagine a highway system inside your body? Well, that's exactly what the circulatory and respiratory systems are! They work hand-in-hand to deliver life's essential, oxygen, along with other important nutrients, to every cell in our bodies.

Picture the **circulatory system** as an intricate network of roads, made up of the heart, blood, and various types of blood vessels like arteries, veins, and tiny capillaries. On the other hand, the **respiratory system** can be seen as the oxygen supply unit that refreshes the body with clean air from each breath you take, and removes carbon dioxide waste. This system consists of the lungs, nose, trachea or windpipe, bronchial tubes, and alveoli or tiny air sacs.

Every time you inhale air through your nose or mouth, it goes on a iourney down your trachea (windpipe) and into two bronchial tubes. Like a tree, each bronchial tube spreads into one of your two lungs, further branching out into smaller tubes, known as bronchioles. At the end of this journey, the air reaches the alveoli, which are millions of tiny balloon-like sacs. Each alveolus is surrounded by tiny blood vessels or capillaries. which is where the oxygen enters the blood cells and the carbon dioxide leaves when air is exhaled.

The circulatory system, like a reliable delivery service, carries this oxygen-rich blood to every single cell in your body. Your heart, which is about the size of your fist, acts as the engine, pumping blood through your blood vessels. Did you know your heart beats about 70 times a minute? Just imagine how many times it beats in a day, a year, or a lifetime!
